PPSC psychology Lectureship Guide

PPSC Psychology Past Papers

Team STUDENT INN

2015

SANJARPUR, SADIQABAD, RAHIMYARKHAN, PAKISTAN

Psychology Important Topics for Complete Preparation

1. Psychology and perspectives
2. Motivation and Emotion
3. Brain and glands
4. Personality
5. Sensation and perception
6. Learning
7. Cognition
8. Consciousness
9. Psychological research

Human development

Physical development (prenatal development, infancy period, childhood, adolescence)

Cognitive development

Moral development

Emotional development

2. Concepts of Abnormality
3. Intelligence and mental retardation
4. Therapies (Psychotherapy, environmental, Cognitive, Humanistic, Behavioral, Somatic, Group, Drug)
5. Psychological disorders (somatoform, neurotic, psychotic, personality, schizophrenia, Anxiety, Mood, Dissociative, sleep, sexual and identity)
6. Industry

Psychology Mcqs Past Papers For Public Service Exams

- 1) The peripheral nervous system is made up of:
 - a) Axons and dendrites
 - b) The brain and the spinal cord
 - c) The autonomic and somatic nervous systems
 - d) The sympathetic and parasympathetic nervous systems
 - e) None of these
- 2) The adrenal hormones which also appear to function as neurotransmitters in the brain are:
 - a) Dopamine and serotonin
 - b) Progesterone and testosterone
 - c) Epinephrine and nor epinephrine
 - d) Insulin and toberone

- e) None of these
- 3) The detection of physical energy emitted or reflected by physical objects: it occurs when energy in the external environment or the body stimulates receptors in the sense organs:
 - a) Cognition
 - b) Sensation
 - c) Perception
 - d) Adaptation
 - e) None of these
- 4) Which of the following is a dimension of visual experience?
 - a) Loudness
 - b) Pitch
 - c) Timbre
 - d) Brightness
 - e) None of these
- 5) All human senses evolved for the same purpose to:
 - a) Increase our ability to enjoy the environment
 - b) Make up more aware our feelings and internal state
 - c) Provide information that could improve our ability to communicate
 - d) Help us survive
 - e) None of these
- 6) The fovea and blind spot are both features of the:
 - a) Cornea
 - b) Lens
 - c) Retina
 - d) Pupil
 - e) None of these
- 7) Which of the following is the best example of a primary reinforcing?
 - a) Food
 - b) Money
 - c) Pay check
 - d) New clothes
 - e) None of these
- 8) Which of the following could be attributed to Tolman's research?
 - a) Discovery of the law of effect
 - b) The concept of cognitive map
 - c) The negative effect of punishment
 - d) The role of classical conditioning in the formation of phobic disorders
 - e) None of these
- 9) Which of the following factors influence the impact of interference on learning?
 - a) The nature of the material being learned
 - b) The organization and meaningfulness of the information learned

- c) The type of activity that flows studying
 - d) All of the above
 - e) None of these
- 10) Which of the following psychologists developed the need/drive theory of emotion?
- a) Clark Hull
 - b) Abraham Maslow
 - c) Robert Plutchik
 - d) Water Cannon
 - e) None of these
- 11) Which of the following orders of Maslow's hierarchy of need is correct?
- a) Safety, physiological, belongingness, self-actualization, esteem
 - b) Belongingness, esteem, safety, physiological, self-actualization
 - c) Physiological, belongingness, safety, esteem, self-actualization
 - d) Physiological, safety, belongingness, esteem, self-actualization
 - e) None of these
- 12) Central traits:
- a) Were suggested by a behaviorist to explain behavior
 - b) Organize and control behavior across many situations
 - c) Are more situations specific than they are secondary traits
 - d) Are seen in growth-oriented individuals
 - e) None of these
- 13) Norms are influenced by:
- a) The surrounding culture
 - b) The surrounding sub-culture
 - c) The context of the situation
 - d) All of the above
 - e) None of these
- 14) Discrepancies between attitudes lead to:
- a) Prejudice
 - b) Cognitive dissonance
 - c) The fundamental attribution error
 - d) Relative deprivation
 - e) None of these
- 15) Many of the neo Freudians have modified Freud's original theory of personality to give more emphasis to:
- a) Childhood sexuality
 - b) Social and cultural factors
 - c) Differences between the sexes
 - d) Unconscious forces
 - e) None of these
- 16) Motivation is defined as inferred process within a person that causes organism to move toward:

- a) A goal
 - b) All other organisms
 - c) A homeostatic state
 - d) Higher levels in the hierarchy of needs
 - e) None of these
- 17) In which motivational conflicts are must chosen by “the lesser of two evils”
- a) Approach-Approach
 - b) Approach-Avoidance
 - c) Avoidance-Avoidance
 - d) Multiple approach-avoidance
 - e) None of these
- 18) Which of the following identified universal symbolic images that appear in myths, art, dreams, and other expressions of the collective unconscious?
- a) Freud
 - b) Adler
 - c) Jung
 - d) Horney
 - e) All of these
- 19) Raymond B Cattell advanced the study of personality traits by using a statistical method called:
- a) Locus of control
 - b) Identification
 - c) Factor analysis
 - d) Phrenology
 - e) None of these
- 20) Perfection is a problem that is most associated with the:
- a) Id
 - b) Ego
 - c) Superego
 - d) Ego and superego
 - e) None of these

2004 paper 2

8. Write only the correct answer in your Answer Book. Don't reproduce the questions.

- 1) Which of the following represent correct sequence?
- a) Zygote, fetus, embryo, neonate, infant
 - b) Zygote, embryo, neonate, fetus, infant
 - c) Embryo, zygote, fetus, neonate, infant
 - d) Zygote, embryo, fetus, neonate, infant
- 2) Maturation refers to development that occurs as a result of:
- a) Genetically determined signals
 - b) Instinctive process
 - c) Homeostatic imbalances

- d) An interaction between biology and environment
 - e) None of these
- 3) Which of the following is not one of the aspects of development studied by psychologists?
- a) Universal aspects of development
 - b) Individual differences in development
 - c) Cultural differences in development
 - d) Immutable laws of development
 - e) None of these
- 4) Which of the following is most likely to lead to high job satisfaction?
- a) Matching personality with occupation
 - b) Promotion practices based on seniority
 - c) Having an outgoing personality
 - d) Working alone
 - e) None of these
- 5) Which of the following improves worker skills and reduces frustration and stress?
- a) Job training
 - b) Job analysis
 - c) Access to an employee assistance program
 - d) An organizational culture
 - e) None of these
- 6) The assessment tools upon which clinicians depend to gather information about their clients belong in which of the following categories.
- a) Interviews
 - b) Tests
 - c) Observations
 - d) All of these choices
 - e) None of these
- 7) Which of the following tests is likely to have the highest reliability?
- a) The TAT
 - b) The Rorschach
 - c) The MMPI
 - d) The Draw-a-Person test
 - e) None of these
- 8) Clinicians attempting to systematically assess the abnormal behavior of a client will frequently:
- a) Rely primarily on personality tests
 - b) Employ a battery of tests
 - c) Rely primarily on projective tests
 - d) Rely primarily on neuropsychological tests
 - e) None of these
- 9) The best definition of psychotherapy includes:
- a) A sufferer, a healer and a systematic interaction between the two

- b) A healer that uncovers unconscious conflicts and heals the personality
 - c) The removal of symptoms about which the patient complains
 - d) The use of talking and drugs about which the patient complains
 - e) None of these
- 10) Psycho dynamic therapists believe that maladaptive behavior stems from:
- a) Disturbed thought patterns
 - b) Inappropriate learning patterns
 - c) A failure to live up one's full potential
 - d) Emotional trauma experienced in childhood
 - e) None of these
- 11) Which of the following therapists make intensive use of role playing?
- a) Client-centered therapists
 - b) Psychoanalytic therapists
 - c) Existential therapists
 - d) Gestalt therapists
 - e) None of these
- 12) Client-centered therapy is most consistent with the:
- a) Behavioral approach
 - b) Cognitive approach
 - c) Psychodynamic approach
 - d) Humanistic approach
 - e) None of these
- 13) Illnesses that seem to result from an interaction of physical and psychological factors are called:
- a) Hysterical
 - b) Psychosomatic
 - c) Somatic
 - d) Conversion disorders
 - e) None of these
- 14) Chromosomal mapping studies have found that:
- a) Schizophrenia does not appear to have genetic components
 - b) Schizophrenia does appear to have a genetic component
 - c) Adoption studies do not reveal anything about schizophrenia
 - d) There is a single cause of schizophrenia
 - e) None of these
- 15) The leading cause of mind retardation is believed to be:
- a) Fetal alcohol syndrome
 - b) Organic brain syndrome
 - c) Environmental factors
 - d) Inherited traits
 - e) None of these
- 16) Therapists who focus on altering faulty thought process are:

- a) Cognitive therapists
 - b) Humanistic therapists
 - c) Biological therapists
 - d) Psychodynamic therapists
 - e) None of these
- 17) In general children who score well on IQ tests have parents who:
- a) Pay for tutors and special schools
 - b) Have very high IQs
 - c) Punish them if they fail to do it well
 - d) Spend time with them and actively encourage their development
 - e) None of these
- 18) One hallmark of projective tests is that they:
- a) Are multiphase
 - b) Are criterion referenced
 - c) Require responses to ambiguous stimuli
 - d) Measure only one trait
 - e) None of these
- 19) When psychological tests are used in personal selection, an important concern regarding the tests is:
- a) Cost
 - b) Ease of administration
 - c) Validity
 - d) Objectivity
 - e) None of these
- 20) A conversion disorder is characterized by:
- a) Functional impairment of a limb or sensory ability with no apparent physical cause
 - b) A constant fear of becoming seriously ill
 - c) Frequently vague complaints of physical symptoms
 - d) None of these
- 2005 paper 1
8. Write only the correct answer in your Answer Book. Don't reproduce the questions.
- 1) By the perceptual organization of stimuli the person's span of attention is:
- a) Increased
 - b) Decreased
 - c) Divided
 - d) Unaffected
 - e) None of these
- 2) Figural after-effects pertain to distortion:
- a) In memory of figures
 - b) Caused by ambiguity of figures
 - c) Caused by prolonged fixation of figures

- d) Caused by oscillation of attention
 - e) None of these
- 3) One of the following is not a monocular depth cue:
- a) Interposition
 - b) Relative moment
 - c) Convergence
 - d) Accommodation
 - e) None of these
- 4) The cerebellum and cerebrum are:
- a) Functionally independent
 - b) Bilaterally symmetrical
 - c) Found in the mid-brain
 - d) In front of the central fissure
 - e) None of these
- 5) Factors predisposing an individual towards feeling of jealousy include:
- a) Lack of intensity of feeling of love
 - b) Insecurity of self-conception
 - c) Self-hate
 - d) All of these
 - e) None of these
- 6) Copying behavior is:
- a) Often unconscious
 - b) A form of habitual behavior
 - c) Always goal-directed
 - d) Usually carried out with minimum attention
 - e) None of these
- 7) Self-assertive behavior is an example primarily of:
- a) An abundance motive
 - b) A stimulation motive
 - c) A survival motive
 - d) A security motive
 - e) None of these
- 8) The concept of homeostasis most closely associated with the name of:
- a) Richter
 - b) Cannon
 - c) Levin
 - d) Warden
 - e) None of these
- 9) The approach-approach conflict involves:
- a) A stable equilibrium
 - b) An unstable equilibrium

- c) An oscillation of (a) and (b)
 - d) Neither (a) nor (b) (c)
 - e) None of these
- 10) The two parts of autonomic nervous system are:
- a) Voluntary and involuntary
 - b) Cerebrospinal and cortical
 - c) Thalamus and hypothalamus
 - d) Sympathetic and parasympathetic
 - e) None of these
- 11) Which one of the following is not the law of perceptual grouping?
- a) Proximity
 - b) Similarity constancy
 - c) Constancy
 - d) Continuation
 - e) None of these
- 12) In Pavlovian conditioning the learned response is:
- a) CS
 - b) CR
 - c) UCS
 - d) UCR
 - e) None of these
- 13) Thorndike's "Law of Effect" was an early form of the present day principle of:
- a) Extinction
 - b) Contiguity
 - c) Reinforcement
 - d) Trial and error
 - e) None of these
- 14) When new acquisition improves retention of the old, we speak of:
- a) Positive transfer
 - b) Negative transfer
 - c) Reproductive facilitation
 - d) Reproductive interference
 - e) None of these
- 15) Of the following one is not a measure of retention:
- a) Recognition
 - b) Recall
 - c) Relearning
 - d) Reminiscence
 - e) None of these
- 16) Typically the curve obtained in discrimination learning in animals is:
- a) Positively accelerated

- b) Linearly accelerated
- c) Negatively accelerated
- d) S-shaped
- e) None of these

17) Development of any skill depends intimately on:

- a) Muscle facility
- b) Feedback
- c) Abstractions
- d) Kinesthetic stimulation
- e) None of these

18) The theory of personality in which “basic anxiety” is the primary concept was associated with the name:

- a) Fromm
- b) Sullivan
- c) Horney
- d) Murray
- e) None of these

19) In the perception of people, feedback will serve to:

- a) Correct an incorrect initial perception
- b) Confirm an accurate initial perception
- c) Stabilize and inaccurate initial perception
- d) None of the above would be true
- e) None of these

20) The essential feature of client-centered therapy is:

- a) The giving of reassurance to the client
- b) The facilitating the client to arrive at his own insight about his problem
- c) Its directive character
- d) Its emphasis upon searching for deep unconscious aspects of the problem
- e) None of these

2005 paper 2

8. Write only the correct answer in your Answer Book. Don't reproduce the questions.

1) Studies on maturation and learning have indicated:

- a) That environmental stimulation may effect growth
- b) That some factor may affect normal development
- c) That the two follow independent course
- d) Both (a) and (b) above
- e) None of these

2) The over-all bodily and mental curves for man:

- a) Diverge at the age of puberty
- b) Run parallel course
- c) Show a drop at the age of puberty

- d) Both (b) and (c)
 - e) None of these
- 3) Psychosomatic disorders are best illustrated by:
- a) Asthma caused by anxiety
 - b) Neurotic anxiety
 - c) Depression caused by tuberculosis
 - d) Over-eating
 - e) None of these
- 4) Which one of the following is not listed as classification of psychoneurosis?
- a) Phobic reactions
 - b) Conversion reactions
 - c) Delusional reactions
 - d) Neurasthenic reactions
 - e) None of these
- 5) So-called “functional” and “organic” psychoses are:
- a) Really both functional in origin
 - b) Really both organic in origin
 - c) Clearly differentiated as to the origin
 - d) Not clearly distinguishable
 - e) None of these
- 6) Psychodrama is one of the psychotherapeutic techniques which basically involve situations representing:
- a) Ego blocking
 - b) Superego blocking
 - c) Primary ego
 - d) All of the above
 - e) None of these
- 7) Psychodynamic therapist believes that maladaptive behavior stems from:
- a) Emotional trauma experienced in childhood
 - b) A failure to live up to one’s full potential
 - c) Disturbed thought patterns
 - d) Inappropriate learning patterns
 - e) None of these
- 8) The semantic differential scale is used mainly to measure:
- a) Values
 - b) Opinions
 - c) Attitudes
 - d) Interests
 - e) None of these
- 9) While selecting a psychological test for personnel selection, main concern regarding the test is:
- a) Cost

- b) Ease of administration
 - c) Validity
 - d) Objectively
 - e) None of these
- 10) The concept of introversion and extroversion was advanced by:
- a) Spranger
 - b) Jung
 - c) Kretchmer
 - d) Jeansch
 - e) None of these
- 11) Emergency reactions refer to:
- a) Individual's attempt to cope with an emergency
 - b) Bodily changes accompanying emotions of anger and fear
 - c) Feeling of startle when suddenly stimulated
 - d) Ways that the individual seeks to achieve emotional control
 - e) None of these
- 12) Studies show that an "authoritarian" family tends to produce an adolescent who is:
- a) Dependent and obedient
 - b) Independent but reserved
 - c) Surface-compliant but rebellious underneath
 - d) Self reliant
 - e) None of these
- 13) The non-directive approach characterizes:
- a) Psychoanalysis
 - b) Behavior modification
 - c) Client-centered therapy
 - d) Hypnosis
 - e) None of these
- 14) Child-rearing practices in Pakistan
- a) Differ little from those in other countries
 - b) Differ from one social class to another
 - c) Have changed very little over past 50 years
 - d) Are now pretty much the same from one social class to the next
 - e) None of the above observation is correct
- 15) In Maslow's theory of personality the main concept is that of:
- a) Functional autonomy
 - b) Acquired drives
 - c) Interpersonal relations
 - d) Self-actualization
 - e) None of these
- 16) According to Erickson's theory, the struggle during adolescence is:

- a) Intimacy vs. isolation
 - b) Initiative vs. guilt
 - c) Identity vs. confusion
 - d) Competence vs. inferiority
 - e) None of these
- 17) According to clinical psychologists unconscious is:
- a) A construct
 - b) A place
 - c) A thing
 - d) An observation
 - e) None of these
- 18) Disagreeing with Freud, Erickson emphasized more on:
- a) Conflict
 - b) Racial memory
 - c) Adulthood
 - d) Early habits
 - e) None of these
- 19) The prototype of the modern intelligence test for children was developed by:
- a) Terman
 - b) Wechsler
 - c) Binet
 - d) Stanford
 - e) None of these
- 20) In Thurston's method of attitude scaling, the key factor is the use of:
- a) Numbers
 - b) Judges
 - c) Reinforcement
 - d) Positive and negative items
 - e) None of these
- 2006 paper 1
- Compulsory Question of Paper I
- The term "Phenomenology" refers to:
- (a) The science of perception
 - (b) The scientific study of "queer" occurrences
 - (c) The "naïve" description of our immediate experiences
 - (d) A detailed analysis of our sensations
 - (e) None of the above
- The degree of concentration or dilution of a colour is known as its:
- (a) Hue
 - (b) Saturation
 - (c) Volume

- (d) Brightness
- (e) None of these

Difference in perception among species depends upon:

- (a) Habitat
- (b) Complexity of nervous system
- (c) Receptor mechanisms
- (d) All of the above
- (e) None of the above

As compared with adult's perception, the child's perception tends to be:

- (a) Less susceptible to illusion
- (b) Longer in time-perspective
- (c) More fully characterized by constancy
- (d) More fully affected by physiognomic properties
- (e) None of the above

As compared with the figure, the ground appears to be;

- (a) Better structured
- (b) Continuous and unbroken
- (c) Better localized
- (d) More salient in attention
- (e) None of these

The concept of adaptation level was introduced by:

- (a) Brown
- (b) Wertheimer
- (c) Kohler
- (d) Helson
- (e) None of these

By the perceptual organization of stimuli the person's span of attention is:

- (a) Increased
- (b) Decreased
- (c) Divided
- (d) Unaffected
- (e) None of these

The cue of accommodation is especially effective for:

- (a) Long distances
- (b) Short distances
- (c) Moving objects
- (d) both (a) and (c)
- (e) None of these

The area of the brain where all the fibers from the skin senses get connected before entering cerebral cortex is the:

- (a) Cerebellum

- (b) Spinal Cord
- (c) Thalamus
- (d) Reticular formation
- (e) None of these

The so called primary emotions include:

- (a) joy, fear, anger, grief
- (b) pain, fear, hate, love
- (c) shame, guilt, anger, grief
- (d) all of the above
- (e) None of these

Factors predisposing an individual towards feeling of jealousy include:

- (a) Insecurity in self-conception
- (b) Lack of intensity of feelings of love
- (c) Self hate
- (d) All of the above
- (e) None of these

Behaviour episodes are:

- (a) Organized sequences of behaviour
- (b) Characterized by a constant direction of action
- (c) Often overlapping
- (d) All of the above
- (e) None of these

Self-assertive behaviour is an example primarily of:

- (a) a stimulation motive
- (b) a security motive
- (c) an abundance motive
- (d) a survival motive
- (e) None of these

The emergency-control branch of human nervous system is:

- (a) Sympathetic
- (b) Parasympathetic
- (c) Cerebrospinal
- (d) Ventromedial
- (e) None of these

The "local" stimulus theory of hunger is associated with the name of:

- (a) Anderson
- (b) Beach
- (c) Cannon
- (d) Helson
- (e) None of these

Examples of ductless glands are:

- (a) Gonads, salivary glands, adrenals
- (b) tear glands, salivary glands, gonads
- (c) Thyroid, pituitary, tear gland
- (d) Adrenal, thyroid, gonads
- (e) None of these

In conditioning studies CR and UR:

- (a) are usually, but not always, identical
- (b) are rarely identical
- (c) Have not similarity
- (d) Are always identical
- (e) None of these

A curve which shows an overall negative slope may show:

- (a) negative acceleration
- (b) positive acceleration
- (c) linear acceleration
- (d) any one of the above
- (e) None of these

The development of any kind of skill depends intimately upon;

- (a) Muscle facility
- (b) Abstract knowledge
- (c) Feedback
- (d) Kinesthetic stimulation
- (e) None of these

Aphasia seems to be correlated with lesions to the:

- (a) Temporal lobes of brain
- (b) Motor Cortex of brain
- (c) Cerebellar cortex of brain
- (d) Frontal lobes of brain
- (e) None of these

2007 paper 1

8. Write only the correct answer in the Answer Book. Do not reproduce the questions.

- (1) The four main goals of psychological research are:
 - (a) Description, experimentation, prediction and control
 - (b) Description, explanation, assessment and manipulation
 - (c) Description, prediction, assessment and manipulation
 - (d) Description, explanation, control and validity
 - (e) None of these
- (2) A verifiable scientific finding is one that can be:
 - (a) Observed in real life
 - (b) Proven impossible to test
 - (c) Proven valid, accurate and indisputable

- (d) Replicated with the same result
- (e) None of these
- (3) An independent variable is:
 - (a) The only variable of interest
 - (b) A variable that is independently verified
 - (c) A variable whose value depends on that of the dependent variable
 - (d) The variable that is manipulated by experiment
 - (e) None of these
- (4) The main regions of brain are the:
 - (a) Hind brain, forebrain, midbrain
 - (b) Cerebral cortex, forebrain, hind brain and midbrain
 - (c) Forebrain, midbrain and anterior region
 - (d) Central hemisphere, and left hemisphere
 - (e) None of these
- (5) Of the three different types of the neurons, sensory neurons are unique in that they:
 - (a) Carry impulses from the brain and spinal cord to parts of the body that then respond to the impulse.
 - (b) Receive information from the receptor cells and send this information to the brain or spinal cord.
 - (c) Reside exclusively in the peripheral nervous system has two functions, to send signals to motor neurons, and to receive signals from receptors.
 - (d) None of these
- (6) The four parts of the neurons are:
 - (a) Axon, cell body, myelin sheath and dendrites
 - (b) Axon, dendrites, nucleus and terminal buttons
 - (c) Axon, cell body, dendrites and terminal buttons
 - (d) Axon, dendrites, myelin sheath and nodes of ranvier
 - (e) None of these
- (7) Effectors and receptor cells are different in:
 - (a) Their composition and speed of conduction
 - (b) The direction in which they carry nerve impulses
 - (c) The corresponding branch of the nervous system to which they belong
 - (d) The effectors never connect with the brain, while receptors receive information from the brain.
 - (e) None of these
- (8) Three dimensional perception of the world is referred to as:
 - (a) Stereopsis
 - (b) Stroboscopy
 - (c) Multiple perspectives
 - (d) Normal vision
 - (e) None of these
- (9) Perpetual constancy refers to:
 - (a) Perception of an object remaining the same even when our immediate sensation of the object

changes.

(b) Perceptual tendency to group objects together on the basis of their similarity.

(c) Perception of an object's changing even though the object stays the same

(d) Tendency to close up, incomplete objects into already existing perceptual shapes

(e) None of these

(10) Gestaltists refer to the fact that we perceive smooth flowing forms more readily than discrete forms as:

(a) Similarity

(b) Symmetry

(c) Holistic perception

(d) Continuity

(e) None of these

(11) Classical conditioning is a process whereby:

(a) Certain response result from certain stimulus presentations

(b) The CS is always presented before the UCS

(c) Actions that are reward tend to be strengthened

(d) Learning occurs when a stimulus is paired with a certain response

(e) None of these

(12) Edward Tolman's experiments with rats showed that:

(a) Learning could be achieved without reinforcement

(b) Rats could learn second order conditioning in the absence of food

(c) All rats behaviour could be analyzed by stimulus – response contingencies

(d) The law of effect was not valid in all animals

(e) None of these

(13) Albert's Bandura's social learning theory holds that:

(a) Learning is best in group settings

(b) Learning can be achieved by observing and modeling another person's behaviour

(c) Mere exposure to an aggressive scene always later elicits aggressive behaviour

(d) Social learning takes place at an unconscious level

(e) None of these

(14) According to Marlow's hierarchy of needs, individuals:

(a) May bypass a level in their quest for self actualization

(b) Must satisfy self-esteem needs before achieving belongingness and love needs

(c) Always end their lives self actualized

(d) Must satisfy esteem needs before the process of self-actualization

(e) None of these

(15) Research by Edward Deci has suggested that extrinsic motivators are more effective when they are:

(a) Stated up front so that the individual knows what he or she will be receiving

(b) Tangible and easily identifiable

(c) Received immediately before the task is accomplished

- (d) Intangible, such as verbal praise or smile
 - (e) None of these
- (16) Goals can help us motivated by all the following except:
- (a) Focusing our attention
 - (b) Encouraging alternative ways of achieving goals
 - (c) Allowing us the freedom to be spontaneous in our activities
 - (d) Mobilizing our resources
 - (e) None of these
- (17) Psychodynamic determinism refers to:
- (a) Behaviour that is rules by forces over which we have no control
 - (b) Behaviour that is preconscious in origin
 - (c) Id impulses that will forever remain unfulfilled
 - (d) The delimiting characteristics of the superego
 - (e) None of these
- (18) According to Freudian, dream terminology, condensation refers to:
- (a) Repressed urges that find disguised outlets for expression
 - (b) The bizarre, irrational quality of dreams
 - (c) The process whereby unacceptable thoughts or impulses are combined into a single dream image
 - (d) The process whereby one thing may stand for another in dream interpretation
 - (e) None of these
- (19) Group popularization is an affect whereby:
- (a) Extreme opinions in a group becomes moderate with increased group interaction
 - (b) Group members moderate positions become polarized with increased group interaction
 - (c) Group decisions represent an exaggeration of the group members initial positions
 - (d) The group members' main concern is to maintain unanimity and group cohesion
 - (e) None of these
- (20) Group think is unlikely to occur when which of the following factors is present?
- (a) There is a high degree of stress in the decision-making process
 - (b) There are clear objective in the decision making process
 - (c) The group is homogeneous in composition
 - (d) The group is ideologically isolated
 - (e) None of these

2007PSYCHOLOGY, PAPER – II

COMPULSORY QUESTION8. Write only the correct answer in the Answer Book. Do not reproduce the questions.

- (1) The study of the hereditary transmission of attributes is:
- (a) Heritability, biological traits
 - (b) Genetics, genes
 - (c) Adaptability, dominant and recessive traits
 - (d) Mutation, differentiation

- (e) None of these
- (2) A male born with an extra Y chromosome, XYY, shows some evidence of increased aggressiveness and typically scores lower than normal on intelligence tests:
 - (a) Turner's syndrome
 - (b) Supermale Syndrome
 - (c) XXX syndrome
 - (d) Kinfefelter's syndrome
 - (e) None of these
- (3) The material of which chromosomes are composed is called:
 - (a) Deoxyribonucleic acid
 - (b) Genes
 - (c) Atoms
 - (d) Myelin
 - (e) None of these
- (4) Maturation refers to:
 - (a) The attainment of successive stages of cognitive development.
 - (b) Relatively stable changes in an individual's thought and behavior or a result of biological processor of aging.
 - (c) Relatively stable changes in an individual's thought and behavior as a result of accumulating experience.
 - (d) The development of an individual thought and behavior due to the interactions of biological and environmental factors
 - (e) None of these
- (5) According to one definition, behavior is abnormal if it is:
 - (a) Labeled as abnormal by the society in which the individual lives
 - (b) Not under conscious control by the individual
 - (c) Statistically typical
 - (d) Adaptive to the individual
 - (e) None of these
- (6) Anxiety disorders may be characterized by:
 - (a) Psychotic symptoms
 - (b) Low affect
 - (c) Telegraphic thoughts
 - (d) Somatic symptoms
 - (e) None of these
- (7) Two examples of mood disorders are:
 - (a) Major depression and generalized anxiety disorder
 - (b) Obsessive compulsive disorder and manic-depressive disorder
 - (c) Major depression and dipolar disorder
 - (d) Major depression and obsessive compulsive disorder
 - (e) None of these

- (8) An individual cannot remember events during an immediately following a serious airplane crash:
- (a) Dissociative amnesia
 - (b) Dissociative fugue
 - (c) Retrograde amnesia
 - (d) Fractured amnesia
 - (e) None of these
- (9) A type of schizophrenia characterized by hallucinations, delusions, and diffuse psychological organization is referred to as:
- (a) Undifferentiated
 - (b) Disorganized
 - (c) Residual
 - (d) Fragmented
 - (e) None of these
- (10) An individual who is identified as having a borderline personality disorder shows:
- (a) Persecutory thoughts
 - (b) Exhibitionistic tendencies
 - (c) Instability in mood and social relations
 - (d) Apathy and indifference to the opinions of others
 - (e) None of these
- (11) Which symptoms is not typically characteristic of an autistic child?
- (a) Impairment in communication
 - (b) Hyperactivity
 - (c) Restricted range of interest
 - (d) Social isolation
 - (e) None of these
- (12) The Stanford-Binet, WAIS-R and WISC are known to have very high reliability. This means that:
- (a) A pretest has been given to a representative
 - (b) The test yields consistent results, for example-retesting
 - (c) The test measures what it is supposed to measure
 - (d) The result of the test will be distributed on a bell shaped curve
 - (e) None of these
- (13) The experience that has the clearest, most profound effect on intellectual development:
- (a) Being enrolled in Head Start Program
 - (b) Growing up in an economically disadvantaged home or neighbourhood
 - (c) Being raised in a very neglected home
 - (d) Being exposed to very stimulating toys and lessons in infancy
- (14) A therapist who encourages clients to relate their dreams and searches its roots is:
- (a) Psychoanalysis
 - (b) Humanistic therapy
 - (c) Person-centered therapy
 - (d) Cognitive therapy

- (e) None of these
- (15) The most enthusiastic or optimistic view of Psychotherapy comes from:
- (a) Outcome research
 - (b) Psychologist Hans Eysenck
 - (c) Reports of clinicians
 - (d) An NIMH study of treatment for depression
 - (e) None of these
- (16) An approach that seeks to alleviate poverty and to other stresses that put people at high risk for developing psychological disorders is:
- (a) Biomedical therapy
 - (b) The humanistic approach
 - (c) Empathy and active listening
 - (d) Preventive mental health
 - (e) None of these
- (17) If a person washes his hands 100 times a day, the behavior will be labeled disordered because it is:
- (a) Unjustified and maladaptive
 - (b) An atypical behavior
 - (c) Not explained by the medical model
 - (d) Harmful and disturbing to others
- (18) The DSM-111-R has improved reliability because it helps mental health workers base their diagnosis on:
- (a) A few well-defined categories
 - (b) In-depth history of the patient
 - (c) The patient's observable behaviour
 - (d) The theories of Pinel, Freud and others
 - (e) None of these
- (19) An episode of intense dread, which is typically accompanied by feelings of terror and dizziness, chest pain etc. is called:
- (a) Generalized or chronic anxiety
 - (b) A social phobia
 - (c) A panic attack
 - (d) An obsessive fear
 - (e) None of these
- (20) Amnesia, fugue and multiple personality involve gaps in awareness, for example, sudden loss of memory or change of identity. These Psychological disorders are called:
- (a) Anxiety disorders
 - (b) Dissociative disorders
 - (c) Mood disorders
 - (d) Memory disorders
 - (e) None of these

Psychology Mcqs For PCS & CSS Exams

1-The child's increasing skill at using his muscles is due chiefly to:

- a. Maturation
- b. Learning
- c. Pushing by parents
- d. An opportunity to exercise
- e. None of these

2-The stage of prenatal development during which the developing organism is most vulnerable to injury is the:

- a. Zygotic stage
- b. Germinal stage
- c. Fetal stage
- d. Embryonic stage
- e. None of these

3-Which of the following is part of the psychosocial domain?

- a. Motor skills
- b. Memory
- c. Judgment
- d. Style of behaving
- e. None of these

4-It would be more accurate to say that maturation:

- a. Can be delayed by illness or poor nutrition
- b. Is dramatically accelerated by good nutrition
- c. Is greatly accelerated by good health care and delayed by illness
- d. Is not affected by any environmental factors because it is genetic

5-The first two weeks of life are referred to as:

- a. The period of infancy
- b. The preoperational stage
- c. Early childhood
- d. The neonatal period
- e. None of these

6-An individual becomes a member of social group through the process of:

- a. Aging
- b. Socialization
- c. Learning
- d. Maturation
- e. None of these

7-When a researcher tests several groups of people at the same time each group at a different age,

he is conducting
a(n) _____ study.

- a. Observational
- b. Longitudinal
- c. Cross-sectional
- d. Sequential
- e. None of these

8-Piaget's stage for infancy is:

- a. Concrete operations
- b. Formal operation
- c. Preoperational thought
- d. Sensory motor thoughts
- e. None of these

9-Job satisfaction is enhanced by tasks that are:

- a. Challenging but not overwhelming
- b. Very easy to accomplish
- c. Overwhelming and rewarding
- d. Unrelated to one's personal needs
- e. None of these

10-Basic characteristics of tasks that result in social loafing is that they are:

- a. Additive
- b. Subtractive
- c. Multiplicative
- d. Negative

e. None of these

11-The process by which a trained professional uses psychological methods to help people with psychological problem is known as:

- a. Psychiatry
- b. Psychoanalysis
- c. Psychotherapy
- d. Psychosurgery
- e. None of these

12-Albert Ellis and Aron Beck are names associated with the _____ therapy approach.

- a. Gestalt
- b. Cognitive
- c. Behavioral
- d. Phenomenological
- e. None of these

13-An affective disorder in which a person swings from one mood extreme to another is classified

as:

- a. Manic
- b. Depressive
- c. Unipolar
- d. Bipolar
- e. None of these

14-The leading cause of mental retardation is believed to be:

- a. Fetal alcohol syndrome
- b. Organic brain syndrome
- c. Environmental factors
- d. Inherited traits
- e. None of these

15-People who consistently come up with _____ explanations of events are more prone to depression.

- a. Overly optimistic
- b. Pessimistic
- c. Delusional
- d. dysthemic
- e. None of these

16-According to Piaget the process of building mental representation of the world through direct interaction with it is:

- a. Adaptation
- b. Egocentrism
- c. metacognition
- d. Conservation
- e. None of these

17-Intelligence can be defined as:

- a. Knowledge of a great many facts
- b. The ability to get good grades in school
- c. The ability to think abstractly and learn from experience
- d. All the factors that make one person different from another
- e. None of these

18-When people are _____ they have lost touch with reality.

- a. Manic
- b. Neurotic
- c. Psychotic
- d. Psychopathic
- e. None of these

19-Which of the following clinical procedures are based, in part on classical conditioning?

- a. Transference

- b. Systematic desensitization
- c. Token economy
- d. Two chair technique
- e. None of these

20-Illnesses that seem to result from an interaction of physical and psychological factors are called:

- a. Hysterical
- b. Psychosomatic
- c. Somatic
- d. Conversion disorder
- e. None of these

Psychology Mcqs Past Papers For Public Service Exams

1) The peripheral nervous system is made up of:

- a) Axons and dendrites
- b) The brain and the spinal cord
- c) The autonomic and somatic nervous systems
- d) The sympathetic and parasympathetic nervous systems
- e) None of these

2) The adrenal hormones which also appear to function as neurotransmitters in the brain are:

- a) Dopamine and serotonin
- b) Progesterone and testosterone
- c) Epinephrine and nor epinephrine
- d) Insulin and toberlone
- e) None of these

3) The detection of physical energy emitted or reflected by physical objects: it occurs when energy in the external environment or the body stimulates receptors in the sense organs:

- a) Cognition
- b) Sensation
- c) Perception
- d) Adaptation
- e) None of these

4) Which of the following is a dimension of visual experience?

- a) Loudness
- b) Pitch

- c) Timbre
- d) Brightness
- e) None of these

5) All human senses evolved for the same purpose to:

- a) Increase our ability to enjoy the environment
- b) Make up more aware our feelings and internal state
- c) Provide information that could improve our ability to communicate
- d) Help us survive
- e) None of these

6) The fovea and blind spot are both features of the:

- a) Cornea
- b) Lens
- c) Retina
- d) Pupil
- e) None of these

7) Which of the following is the best example of a primary reinforcing?

- a) Food
- b) Money
- c) Pay check
- d) New clothes
- e) None of these

8) Which of the following could be attributed to Tolman's research?

- a) Discovery of the law of effect
- b) The concept of cognitive map
- c) The negative effect of punishment
- d) The role of classical conditioning in the formation of phobic disorders
- e) None of these

9) Which of the following factors influence the impact of interference on learning?

- a) The nature of the material being learned
- b) The organization and meaningfulness of the information learned
- c) The type of activity that flows studying
- d) All of the above
- e) None of these

10) Which of the following psychologists developed the need/drive theory of emotion?

- a) Clark Hull
- b) Abraham Maslow
- c) Robert Plutchik
- d) Water Cannon
- e) None of these

11) Which of the following orders of Maslow's hierarchy of need is correct?

- a) Safety, physiological, belongingness, self-actualization, esteem
- b) Belongingness, esteem, safety, physiological, self-actualization
- c) Physiological, belongingness, safety, esteem, self-actualization
- d) Physiological, safety, belongingness, esteem, self-actualization
- e) None of these

12) Central traits:

- a) Were suggested by a behaviorist to explain behavior
- b) Organize and control behavior across many situations
- c) Are more situations specific than they are secondary traits
- d) Are seen in growth-oriented individuals
- e) None of these

13) Norms are influenced by:

- a) The surrounding culture
- b) The surrounding sub-culture
- c) The context of the situation
- d) All of the above
- e) None of these

14) Discrepancies between attitudes lead to:

- a) Prejudice
- b) Cognitive dissonance
- c) The fundamental attribution error
- d) Relative deprivation
- e) None of these

15) Many of the neo Freudians have modified Freud's original theory of personality to give more emphasis to:

- a) Childhood sexuality
- b) Social and cultural factors
- c) Differences between the sexes

- d) Unconscious forces
- e) None of these

16) Motivation is defined as inferred process within a person that causes organism to move toward:

- a) A goal
- b) All other organisms
- c) A homeostatic state
- d) Higher levels in the hierarchy of needs
- e) None of these

17) In which motivational conflicts are must chosen by “the lesser of two evils”

- a) Approach-Approach
- b) Approach-Avoidance
- c) Avoidance-Avoidance
- d) Multiple approach-avoidance
- e) None of these

18) Which of the following identified universal symbolic images that appear in myths, art, dreams, and other expressions of the collective unconscious?

- a) Freud
- b) Adler
- c) Jung
- d) Horney
- e) All of these

19) Raymond B Cattell advanced the study of personality traits by using a statistical method called:

- a) Locus of control
- b) Identification
- c) Factor analysis
- d) Phrenology
- e) None of these

20) Perfection is a problem that is most associated with the:

- a) Id
- b) Ego
- c) Superego
- d) Ego and superego
- e) None of these

2004 paper 2

8. Write only the correct answer in your Answer Book. Don't reproduce the questions.

1) Which of the following represent correct sequence?

- a) Zygote, fetus, embryo, neonate, infant
- b) Zygote, embryo, neonate, fetus, infant
- c) Embryo, zygote, fetus, neonate, infant
- d) Zygote, embryo, fetus, neonate, infant

2) Maturation refers to development that occurs as a result of:

- a) Genetically determined signals
- b) Instinctive process
- c) Homeostatic imbalances
- d) An interaction between biology and environment
- e) None of these

3) Which of the following is not one of the aspects of development studied by psychologists?

- a) Universal aspects of development
- b) Individual differences in development
- c) Cultural differences in development
- d) Immutable laws of development
- e) None of these

4) Which of the following is most likely to lead to high job satisfaction?

- a) Matching personality with occupation
- b) Promotion practices based on seniority
- c) Having an outgoing personality
- d) Working alone
- e) None of these

5) Which of the following improves worker skills and reduces frustration and stress?

- a) Job training
- b) Job analysis
- c) Access to an employee assistance program
- d) An organizational culture
- e) None of these

6) The assessment tools upon which clinicians depend to gather information about their clients belong in which of the following categories.

- a) Interviews

- b) Tests
 - c) Observations
 - d) All of these choices
 - e) None of these
- 7) Which of the following tests is likely to have the highest reliability?
- a) The TAT
 - b) The Rorschach
 - c) The MMPI
 - d) The Draw-a-Person test
 - e) None of these
- 8) Clinicians attempting to systematically assess the abnormal behavior of a client will frequently:
- a) Rely primarily on personality tests
 - b) Employ a battery of tests
 - c) Rely primarily on projective tests
 - d) Rely primarily on neuropsychological tests
 - e) None of these
- 9) The best definition of psychotherapy includes:
- a) A sufferer, a healer and a systematic interaction between the two
 - b) A healer that uncovers unconscious conflicts and heals the personality
 - c) The removal of symptoms about which the patient complains
 - d) The use of talking and drugs about which the patient complains
 - e) None of these
- 10) Psycho dynamic therapists believe that maladaptive behavior stems from:
- a) Disturbed thought patterns
 - b) Inappropriate learning patterns
 - c) A failure to live up one's full potential
 - d) Emotional trauma experienced in childhood
 - e) None of these
- 11) Which of the following therapists make intensive use of role playing?
- a) Client-centered therapists
 - b) Psychoanalytic therapists
 - c) Existential therapists
 - d) Gestalt therapists
 - e) None of these

12) Client-centered therapy is most consistent with the:

- a) Behavioral approach
- b) Cognitive approach
- c) Psychodynamic approach
- d) Humanistic approach
- e) None of these

13) Illnesses that seem to result from an interaction of physical and psychological factors are called:

- a) Hysterical
- b) Psychosomatic
- c) Somatic
- d) Conversion disorders
- e) None of these

14) Chromosomal mapping studies have found that:

- a) Schizophrenia does not appear to have genetic components
- b) Schizophrenia does appear to have a genetic component
- c) Adoption studies do not reveal anything about schizophrenia
- d) There is a single cause of schizophrenia
- e) None of these

15) The leading cause of mind retardation is believed to be:

- a) Fetal alcohol syndrome
- b) Organic brain syndrome
- c) Environmental factors
- d) Inherited traits
- e) None of these

16) Therapists who focus on altering faulty thought process are:

- a) Cognitive therapists
- b) Humanistic therapists
- c) Biological therapists
- d) Psychodynamic therapists
- e) None of these

17) In general children who score well on IQ tests have parents who:

- a) Pay for tutors and special schools
- b) Have very high IQs
- c) Punish them if they fail to do it well

- d) Spend time with them and actively encourage their development
- e) None of these

18) One hallmark of projective tests is that they:

- a) Are multiphase
- b) Are criterion referenced
- c) Require responses to ambiguous stimuli
- d) Measure only one trait
- e) None of these

19) When psychological tests are used in personal selection, an important concern regarding the tests is:

- a) Cost
- b) Ease of administration
- c) Validity
- d) Objectivity
- e) None of these

20) A conversion disorder is characterized by:

- a) Functional impairment of a limb or sensory ability with no apparent physical cause
- b) A constant fear of becoming seriously ill
- c) Frequently vague complaints of physical symptoms
- d) None of these

2005 paper 1

8. Write only the correct answer in your Answer Book. Don't reproduce the questions.

1) By the perceptual organization of stimuli the person's span of attention is:

- a) Increased
- b) Decreased
- c) Divided
- d) Unaffected
- e) None of these

2) Figural after-effects pertain to distortion:

- a) In memory of figures
- b) Caused by ambiguity of figures
- c) Caused by prolonged fixation of figures
- d) Caused by oscillation of attention
- e) None of these

- 3) One of the following is not a monocular depth cue:
- a) Interposition
 - b) Relative moment
 - c) Convergence
 - d) Accommodation
 - e) None of these
- 4) The cerebellum and cerebrum are:
- a) Functionally independent
 - b) Bilaterally symmetrical
 - c) Found in the mid-brain
 - d) In front of the central fissure
 - e) None of these
- 5) Factors predisposing an individual towards feeling of jealousy include:
- a) Lack of intensity of feeling of love
 - b) Insecurity of self-conception
 - c) Self-hate
 - d) All of these
 - e) None of these
- 6) Copying behavior is:
- a) Often unconscious
 - b) A form of habitual behavior
 - c) Always goal-directed
 - d) Usually carried out with minimum attention
 - e) None of these
- 7) Self-assertive behavior is an example primarily of:
- a) An abundance motive
 - b) A stimulation motive
 - c) A survival motive
 - d) A security motive
 - e) None of these
- 8) The concept of homeostasis most closely associated with the name of:
- a) Richter
 - b) Cannon
 - c) Levin

- d) Warden
- e) None of these

9) The approach-approach conflict involves:

- a) A stable equilibrium
- b) An unstable equilibrium
- c) An oscillation of (a) and (b)
- d) Neither (a) nor (b) (c)
- e) None of these

10) The two parts of autonomic nervous system are:

- a) Voluntary and involuntary
- b) Cerebrospinal and cortical
- c) Thalamus and hypothalamus
- d) Sympathetic and parasympathetic
- e) None of these

11) Which one of the following is not the law of perceptual grouping?

- a) Proximity
- b) Similarity constancy
- c) Constancy
- d) Continuation
- e) None of these

12) In Pavlovian conditioning the learned response is:

- a) CS
- b) CR
- c) UCS
- d) UCR
- e) None of these

13) Thorndike's "Law of Effect" was an early form of the present day principle of:

- a) Extinction
- b) Contiguity
- c) Reinforcement
- d) Trial and error
- e) None of these

14) When new acquisition improves retention of the old, we speak of:

- a) Positive transfer

- b) Negative transfer
- c) Reproductive facilitation
- d) Reproductive interference
- e) None of these

15) Of the following one is not a measure of retention:

- a) Recognition
- b) Recall
- c) Relearning
- d) Reminiscence
- e) None of these

16) Typically the curve obtained in discrimination learning in animals is:

- a) Positively accelerated
- b) Linearly accelerated
- c) Negatively accelerated
- d) S-shaped
- e) None of these

17) Development of any skill depends intimately on:

- a) Muscle facility
- b) Feedback
- c) Abstractions
- d) Kinesthetic stimulation
- e) None of these

18) The theory of personality in which “basic anxiety” is the primary concept was associated with the name:

- a) Fromm
- b) Sullivan
- c) Horney
- d) Murray
- e) None of these

19) In the perception of people, feedback will serve to:

- a) Correct an incorrect initial perception
- b) Confirm an accurate initial perception
- c) Stabilize and inaccurate initial perception
- d) Nay of the above would be true
- e) None of these

20) The essential feature of client-centered therapy is:

- a) The giving of reassurance to the client
- b) The facilitating the client to arrive at his own insight about his problem
- c) Its directive character
- d) It's emphasis upon searching for deep unconscious aspects of the problem
- e) None of these

2005 paper 2

8. Write only the correct answer in your Answer Book. Don't reproduce the questions.

1) Studies on maturation and learning have indicated:

- a) That environmental stimulation may effect growth
- b) That some factor may affect normal development
- c) That the two follow independent course
- d) Both (a) and (b) above
- e) None of these

2) The over-all bodily and mental curves for man:

- a) Diverge at the age of puberty
- b) Run parallel course
- c) Show a drop at the age of puberty
- d) Both (b) and (c)
- e) None of these

3) Psychosomatic disorders are best illustrated by:

- a) Asthma caused by anxiety
- b) Neurotic anxiety
- c) Depression caused by tuberculosis
- d) Over-eating
- e) None of these

4) Which one of the following is not listed as classification of psychoneurosis?

- a) Phobic reactions
- b) Conversion reactions
- c) Delusional reactions
- d) Neurasthenic reactions
- e) None of these

5) So-called "functional" and "organic" psychoses are:

- a) Really both functional in origin

- b) Really both organic in origin
 - c) Clearly differentiated as to the origin
 - d) Not clearly distinguishable
 - e) None of these
- 6) Psychodrama is one of the psychotherapeutic techniques which basically involve situations representing:
- a) Ego blocking
 - b) Superego blocking
 - c) Primary ego
 - d) All of the above
 - e) None of these
- 7) Psychodynamic therapist believes that maladaptive behavior stems from:
- a) Emotional trauma experienced in childhood
 - b) A failure to live up to one's full potential
 - c) Disturbed thought patterns
 - d) Inappropriate learning patterns
 - e) None of these
- 8) The semantic differential scale is used mainly to measure:
- a) Values
 - b) Opinions
 - c) Attitudes
 - d) Interests
 - e) None of these
- 9) While selecting a psychological test for personnel selection, main concern regarding the test is:
- a) Cost
 - b) Ease of administration
 - c) Validity
 - d) Objectively
 - e) None of these
- 10) The concept of introversion and extroversion was advanced by:
- a) Spranger
 - b) Jung
 - c) Kretchmer
 - d) Jeansch
 - e) None of these

11) Emergency reactions refer to:

- a) Individual's attempt to cope with an emergency
- b) Bodily changes accompanying emotions of anger and fear
- c) Feeling of startle when suddenly stimulated
- d) Ways that the individual seeks to achieve emotional control
- e) None of these

12) Studies show that an "authoritarian" family tends to produce an adolescent who is:

- a) Dependent and obedient
- b) Independent but reserved
- c) Surface-compliant but rebellious underneath
- d) Self reliant
- e) None of these

13) The non-directive approach characterizes:

- a) Psychoanalysis
- b) Behavior modification
- c) Client-centered therapy
- d) Hypnosis
- e) None of these

14) Child-rearing practices in Pakistan

- a) Differ little from those in other countries
- b) Differ from one social class to another
- c) Have changed very little over past 50 years
- d) Are now pretty much the same from one social class to the next
- e) None of the above observation is correct

15) In Maslow's theory of personality the main concept is that of:

- a) Functional autonomy
- b) Acquired drives
- c) Interpersonal relations
- d) Self-actualization
- e) None of these

16) According to Erickson's theory, the struggle during adolescence is:

- a) Intimacy vs. isolation
- b) Initiative vs. guilt
- c) Identity vs. confusion

- d) Competence vs. inferiority
- e) None of these

17) According to clinical psychologists unconscious is:

- a) A construct
- b) A place
- c) A thing
- d) An observation
- e) None of these

18) Disagreeing with Freud, Erickson emphasized more on:

- a) Conflict
- b) Racial memory
- c) Adulthood
- d) Early habits
- e) None of these

19) The prototype of the modern intelligence test for children was developed by:

- a) Terman
- b) Wechsler
- c) Binet
- d) Stanford
- e) None of these

20) In Thurston's method of attitude scaling, the key factor is the use of:

- a) Numbers
- b) Judges
- c) Reinforcement
- d) Positive and negative items
- e) None of these

2006 paper 1

Compulsory Question of Paper I

The term "Phenomenology" refers to:

- (a) The science of perception
- (b) The scientific study of "queer" occurrences
- (c) The "naïve" description of our immediate experiences

- (d) A detailed analysis of our sensations
- (e) None of the above

The degree of concentration or dilution of a colour is known as its:

- (a) Hue
- (b) Saturation
- (c) Volume
- (d) Brightness
- (e) None of these

Difference in perception among species depends upon:

- (a) Habitat
- (b) Complexity of nervous system
- (c) Receptor mechanisms
- (d) All of the above
- (e) None of the above

As compared with adult's perception, the child's perception tends to be:

- (a) Less susceptible to illusion
- (b) Longer in time-perspective
- (c) More fully characterized by constancy
- (d) More fully affected by physiognomic properties
- (e) None of the above

As compared with the figure, the ground appears to be;

- (a) Better structured
- (b) Continuous and unbroken
- (c) Better localized
- (d) More salient in attention
- (e) None of these

The concept of adaptation level was introduced by:

- (a) Brown
- (b) Wertheimer

- (c) Kohler
- (d) Helson
- (e) None of these

By the perceptual organization of stimuli the person's span of attention is:

- (a) Increased
- (b) Decreased
- (c) Devided
- (d) Unaffected
- (e) None of these

The cue of accomodation is especially effective for:

- (a) Long distances
- (b) Short distances
- (c) Moving objects
- (d) both (a) and (c)
- (e) None of these

The area of the brain where all the fibers from the skin senses get connected before entering cereberal cortex is the:

- (a) Cerebellum
- (b) Spinal Cord
- (c) Thalamus
- (d) Reticular formation
- (e) None of these

The so called primary emotions include:

- (a) joy, fear, anger, grief
- (b) pain, fear, hate, love
- (c) shame, guilt, anger, grief
- (d) all of the above
- (e) None of these

Factors predisposing an individual toeards feeling of jealousy include:

- (a) Insecurity in self-conception
- (b) Lack of intensity of feelings of love
- (c) Self hate
- (d) All of the above
- (e) None of these

Behaviour episodes are:

- (a) Organized sequences of behaviour
- (b) Characterized by a constant direction of action
- (c) Often overlapping
- (d) All of the above
- (e) None of these

Self-assertive behaviour is an example primarily of:

- (a) a stimulation motive
- (b) a security motive
- (c) an abundance motive
- (d) a survival motive
- (e) None of these

The emergency-control branch of human nervous system is:

- (a) Sympathetic
- (b) Parasympathetic
- (c) Cerebrospinal
- (d) Ventromedial
- (e) None of these

The "local" stimulus theory of hunger is associated with the name of:

- (a) Anderson
- (b) Beach
- (c) Cannon
- (d) Helson
- (e) None of these

Examples of ductless glands are:

- (a) Gonads, salivary glands, adrenals
- (b) tear glands, salivary glands, gonads
- (c) Thyroid, pituitary, tear gland
- (d) Adrenal, thyroid, gonads
- (e) None of these

In conditioning studies CR and UR:

- (a) are usually, but not always, identical
- (b) are rarely identical
- (c) Have not similarity
- (d) Are always identical
- (e) None of these

A curve which shows an overall negative slope may show:

- (a) negative acceleration
- (b) positive acceleration
- (c) linear acceleration
- (d) any one of the above
- (e) None of these

The development of any kind of skill depends intimately upon;

- (a) Muscle facility
- (b) Abstract knowledge
- (c) Feedback
- (d) Kinesthetic stimulation
- (e) None of these

Aphasia seems to be correlated with lesions to the:

- (a) Temporal lobes of brain
- (b) Motor Cortex of brain
- (c) Cerebellar cortex of brain
- (d) Frontal lobes of brain
- (e) None of these

2007 paper 1

8. Write only the correct answer in the Answer Book. Do not reproduce the questions.

(1) The four main goals of psychological research are:

- (a) Description, experimentation, prediction and control
- (b) Description, explanation, assessment and manipulation
- (c) Description, prediction, assessment and manipulation
- (d) Description, explanation, control and validity
- (e) None of these

(2) A verifiable scientific finding is one that can be:

- (a) Observed in real life
- (b) Proven impossible to test
- (c) Proven valid, accurate and indisputable
- (d) Replicated with the same result
- (e) None of these

(3) An independent variable is:

- (a) The only variable of interest
- (b) A variable that is independently verified
- (c) A variable whose value depends on that of the dependent variable
- (d) The variable that is manipulated by experiment
- (e) None of these

(4) The main regions of brain are the:

- (a) Hind brain, forebrain, midbrain
- (b) Cerebral cortex, forebrain, hind brain and midbrain
- (c) Forebrain, midbrain and anterior region
- (d) Central hemisphere, and left hemisphere
- (e) None of these

(5) Of the three different types of the neurons, sensory neurons are unique in that they:

- (a) Carry impulses from the brain and spinal cord to parts of the body that then respond to the impulse.
- (b) Receive information from the receptor cells and send this information to the brain or spinal cord.
- (c) Reside exclusively in the peripheral nervous system has two functions, to send signals to motor neurons, and to receive signals from receptors.
- (d) None of these

- (6) The four parts of the neurons are:
- (a) Axon, cell body, myelin sheath and dendrites
 - (b) Axon, dendrites, nucleus and terminal buttons
 - (c) Axon, cell body, dendrites and terminal buttons
 - (d) Axon, dendrites, myelin sheath and nodes of ranvier
 - (e) None of these
- (7) Effectors and receptor cells are different in:
- (a) Their composition and speed of conduction
 - (b) The direction in which they carry nerve impulses
 - (c) The corresponding branch of the nervous system to which they belong
 - (d) The effectors never connect with the brain, while receptors receive information from the brain.
 - (e) None of these
- (8) Three dimensional perception of the world is referred to as:
- (a) Stereopsis
 - (b) Stroboscopy
 - (c) Multiple perspectives
 - (d) Normal vision
 - (e) None of these
- (9) Perpetual constancy refers to:
- (a) Perception of an object remaining the same even when our immediate sensation of the object changes.
 - (b) Perceptual tendency to group objects together on the basis of their similarity.
 - (c) Perception of an object's changing even though the object stays the same
 - (d) Tendency to close up, incomplete objects into already existing perceptual shapes
 - (e) None of these
- (10) Gestaltists refer to the fact that we perceive smooth flowing forms more readily than discrete forms as:
- (a) Similarity
 - (b) Symmetry
 - (c) Holistic perception
 - (d) Continuity
 - (e) None of these
- (11) Classical conditioning is a process whereby:
- (a) Certain response result from certain stimulus presentations
 - (b) The CS is always presented before the UCS

- (c) Actions that are reward tend to the strengthened
- (d) Learning occurs when a stimulus is paired with a certain response
- (e) None of these

(12) Edward Tolman's experiments with rats showed that:

- (a) Learning could be achieved without reinforcement
- (b) Rats could learn second order conditioning in the absence of food
- (c) All rats behaviour could be analyzed by stimulus – response contingencies
- (d) The law of effect was not valid in all animals
- (e) None of these

(13) Albert's Bandura's social learning theory holds that:

- (a) Learning is best in group settings
- (b) Learning can be achieved by observing and modeling another person's behaviour
- (c) Mere exposure to an aggressive scene always later elicits aggressive behaviour
- (d) Social learning takes place at an unconscious level
- (e) None of these

(14) According to Marlow's hierarchy of needs, individuals:

- (a) May bypass a level in their quest for self actualization
- (b) Must satisfy self-esteem needs before achieving belongingness and love needs
- (c) Always end their lives self actualized
- (d) Must satisfy esteem needs before the process of self-actualization
- (e) None of these

(15) Research by Edward Deci has suggested that extrinsic motivators are more effective when they are:

- (a) Stated up front so that the individual knows what he or she will be receiving
- (b) Tangible and easily identifiable
- (c) Received immediately before the task is accomplished
- (d) Intangible, such as verbal praise or smile
- (e) None of these

(16) Goals can help us motivated by all the following except:

- (a) Focusing our attention
- (b) Encouraging alternative ways of achieving goals
- (c) Allowing us the freedom to be spontaneous in our activities
- (d) Mobilizing our resources
- (e) None of these

(17) Psychodynamic determinism refers to:

- (a) Behaviour that is ruled by forces over which we have no control
- (b) Behaviour that is preconscious in origin
- (c) Id impulses that will forever remain unfulfilled
- (d) The delimiting characteristics of the superego
- (e) None of these

(18) According to Freudian, dream terminology, condensation refers to:

- (a) Repressed urges that find disguised outlets for expression
- (b) The bizarre, irrational quality of dreams
- (c) The process whereby unacceptable thoughts or impulses are combined into a single dream image
- (d) The process whereby one thing may stand for another in dream interpretation
- (e) None of these

(19) Group polarization is an affect whereby:

- (a) Extreme opinions in a group become moderate with increased group interaction
- (b) Group members moderate positions become polarized with increased group interaction
- (c) Group decisions represent an exaggeration of the group members' initial positions
- (d) The group members' main concern is to maintain unanimity and group cohesion
- (e) None of these

(20) Groupthink is unlikely to occur when which of the following factors is present?

- (a) There is a high degree of stress in the decision-making process
- (b) There are clear objectives in the decision-making process
- (c) The group is homogeneous in composition
- (d) The group is ideologically isolated
- (e) None of these

2007 PSYCHOLOGY, PAPER – II

COMPULSORY QUESTION 8. Write only the correct answer in the Answer Book. Do not reproduce the questions.

(1) The study of the hereditary transmission of attributes is:

- (a) Heritability, biological traits
- (b) Genetics, genes
- (c) Adaptability, dominant and recessive traits
- (d) Mutation, differentiation
- (e) None of these

(2) A male born with an extra Y chromosome, XYY, shows some evidence of increased aggressiveness and typically scores lower than normal on intelligence tests:

- (a) Turner's syndrome
- (b) Supermale Syndrome
- (c) XXX syndrome
- (d) Kinfefelter's syndrome
- (e) None of these

(3) The material of which chromosomes are composed is called:

- (a) Deoxyribonucleic acid
- (b) Genes
- (c) Atoms
- (d) Myelin
- (e) None of these

(4) Maturation refers to:

- (a) The attainment of successive stages of cognitive development.
- (b) Relatively stable changes in an individual's thought and behavior or a result of biological processor of aging.
- (c) Relatively stable changes in an individual's thought and behavior as a result of accumulating experience.
- (d) The development of an individual thought and behavior due to the interactions of biological and environmental factors
- (e) None of these

(5) According to one definition, behavior is abnormal if it is:

- (a) Labeled as abnormal by the society in which the individual lives
- (b) Not under conscious control by the individual
- (c) Statistically typical
- (d) Adaptive to the individual
- (e) None of these

(6) Anxiety disorders may be characterized by:

- (a) Psychotic symptoms
- (b) Low affect
- (c) Telegraphic thoughts
- (d) Somatic symptoms
- (e) None of these

- (7) Two examples of mood disorders are:
- (a) Major depression and generalized anxiety disorder
 - (b) Obsessive compulsive disorder and manic-depressive disorder
 - (c) Major depression and bipolar disorder
 - (d) Major depression and obsessive compulsive disorder
 - (e) None of these
- (8) An individual cannot remember events during an immediately following a serious airplane crash:
- (a) Dissociative amnesia
 - (b) Dissociative fugue
 - (c) Retrograde amnesia
 - (d) Fractured amnesia
 - (e) None of these
- (9) A type of schizophrenia characterized by hallucinations, delusions, and diffuse psychological organization is referred to as:
- (a) Undifferentiated
 - (b) Disorganized
 - (c) Residual
 - (d) Fragmented
 - (e) None of these
- (10) An individual who is identified as having a borderline personality disorder shows:
- (a) Persecutory thoughts
 - (b) Exhibitionistic tendencies
 - (c) Instability in mood and social relations
 - (d) Apathy and indifference to the opinions of others
 - (e) None of these
- (11) Which symptoms is not typically characteristic of an autistic child?
- (a) Impairment in communication
 - (b) Hyperactivity
 - (c) Restricted range of interest
 - (d) Social isolation
 - (e) None of these
- (12) The Stanford-Binet, WAIS-R and WISC are known to have very high reliability. This means that:
- (a) A pretest has been given to a representative
 - (b) The test yields consistent results, for example-retesting
 - (c) The test measures what it is supposed to measure

- (d) The result of the test will be distributed on a bell shaped curve
- (e) None of these

(13) The experience that has the clearest, most profound effect on intellectual development:

- (a) Being enrolled in Head Start Program
- (b) Growing up in an economically disadvantaged home or neighbourhood
- (c) Being raised in a very neglected home
- (d) Being exposed to very stimulating toys and lessons in infancy

(14) A therapist who encourages clients to relate their dreams and searches its roots is:

- (a) Psychoanalysis
- (b) Humanistic therapy
- (c) Person-centered therapy
- (d) Cognitive therapy
- (e) None of these

(15) The most enthusiastic or optimistic view of Psychotherapy comes from:

- (a) Outcome research
- (b) Psychologist Hans Eysenck
- (c) Reports of clinicians
- (d) An NIMH study of treatment for depression
- (e) None of these

(16) An approach that seeks to alleviate poverty and to other stresses that put people at high risk for developing psychological disorders is:

- (a) Biomedical therapy
- (b) The humanistic approach
- (c) Empathy and active listening
- (d) Preventive mental health
- (e) None of these

(17) If a person washes his hands 100 times a day, the behavior will be labeled disordered because it is:

- (a) Unjustified and maladaptive
- (b) An atypical behavior
- (c) Not explained by the medical model
- (d) Harmful and disturbing to others

(18) The DSM-111-R has improved reliability because it helps mental health workers base their diagnosis on:

- (a) A few well-defined categories
- (b) In-depth history of the patient
- (c) The patient's observable behaviour
- (d) The theories of Pinel, Freud and others
- (e) None of these

(19) An episode of intense dread, which is typically accompanied by feelings of terror and dizziness, chest pain etc. is called:

- (a) Generalized or chronic anxiety
- (b) A social phobia
- (c) A panic attack
- (d) An obsessive fear
- (e) None of these

(20) Amnesia, fugue and multiple personality involve gaps in awareness, for example, sudden loss of memory or change of identity. These Psychological disorders are called:

- (a) Anxiety disorders
- (b) Dissociative disorders
- (c) Mood disorders
- (d) Memory disorders
- (e) None of these

2008 paper 1

Q-1 Select the best option and fill in the appropriate box on the answer sheet.

i- The three basic components of prejudice are Effective:

- (a) Internal and External (b) Real and Imagined (c) Descriptive and Prescriptive (d) Cognitive and Behavioral (e) None of these

ii- Which of the following is an example of extrinsic motivation?

- (a) Doing a good job because of the sense of satisfaction when you are finished (b) Doing a good job in order to get a pay raise (c) Working hard because of the pride you take in your work (d) Doing a good job because you enjoy your work (e) None of these

iii- Sources of frustration include:

- (a) Environmental lacks (b) Environmental obstacles (c) incompatible motives (d) All of these (e) None of these

iv- Which of the following is NOT a characteristic of perception?

- (a) Perception is an active process (b) Perception is a highly selective process (c) Perception is unaffected by motivation (d) Perception is so automatic that we are not aware of it (e) None of these

v- The first task in psychology is to carefully observe and objectively describe:

- (a) Animals (b) Behaviour (c) Social Institution (d) Symptoms of abnormality (e) None of these

vi- Homeostasis is maintained by the _____ which also plays an important role in emotions:

- (a) Hypothalamus (b) Thalamus (c) Limbic System (d) Reticular Activating System (e) None of these

vii- Some of the fibers from each eye cross over to the opposite brain hemisphere at the:

- (a) Optic Chiasma (b) Optic Nerve (c) Blind Spot (d) Fovea (e) None of these

viii- Which one of the following is not a dimension of the auditory experience?

- (a) Loudness (b) Pitch (c) Saturation (d) Timbre (e) None of these

ix- The best studied perceptual constancies include:

- (a) Brightness, focus, angle (b) Shape, location, size (c) Colour, texture, content (d) Size, age, weight (e) None

x- Behaviour according to Operant conditioning theory is controlled by:

- (a) Its consequences (b) Free will (c) Knowledge (d) Instinct (e) None of these

xi- Experts generally agree that the primary emotions include:

- (a) Fear, Anger and Joy (b) Disgust, anger and shame (c) Love, joy and sadness (d) Fear, anger and hatred (e) None of these

xii- According to Freud, most of the things, we do, think and feel are caused by:

- (a) Conditioned response to our surroundings (b) Unconscious forces of which we are not aware (c) A strong desire to grow and develop (d) The beliefs and ideas we have about the world

xiii- One of the factors Alfred Adler believed to be important in shaping personality is:

- (a) Difficulty with toilet training (b) Birth order in the family (c) Unconditional positive regard (d) The collective unconscious (e) None of these

xiv- Which of the following orders of Maslow's hierarchy of needs is correct:

- (a) Safety, physiological, belongingness, self actualization, esteem (b) Belongingness, esteem, physiological, safety, self actualization (c) Physiological, belongingness, safety, esteem, self actualization (d) Physiological, safety, belongingness, esteem, self actualization (e) None of these

xv- The statement that psychology is empirical means:

- (a) Psychology is different from other sciences
- (b) The methods of psychology are based on controlled experiments and on observations made with great precision and objectivity
- (c) Scientific psychology originated in greek and roman ages
- (d) Psychological principles are based on consensus of scientists
- (e) None of these

xvi- Many of the Neo-Freudians have modified Freud's original theory of personality to give more emphasis to:

- (a) Child sexuality
- (b) Social and cultural factors
- (c) Difference between sexes
- (d) Unconscious forces
- (e) None of these

xvii- Norms can be best defined as:

- (a) Standards and expectations shared by members of a society
- (b) rules of law
- (c) Statistically normal behaviour
- (d) Universal rules of conduct
- (e) None of these

xviii- The kind of conflict experienced by a student who simultaneously wants to watch a late night movie on television and get a good night's sleep is best described as:

- (a) Approach-avoidance
- (b) Double approach-avoidance
- (c) Approach-Approach
- (d) Avoidance-Avoidance
- (e) None of these

xix- Axon and dendrites are part of a:

- (a) Myelin Sheath
- (b) Cell body
- (c) Neuron
- (d) Node
- (e) None of these

xx- Motion pictures are based on:

- (a) The gamma phenomenon
- (b) The principle of illusionary circle
- (c) The autokinetic illusion
- (d) Stroboscopic vision
- (e) None of these

2008 paper 2

i- According to Alfred Adler, helplessness of the infant accounts for:

- (a) feelings of inferiority
- (b) compensatory strivings
- (c) A need to strive for superiority
- (d) All of these

ii- Jean Piaget's theory of cognitive development states:

- (a) Children are egocentric during the stage of pre operational thought
- (b) Object permanance is developed during stage of concrete operational thought
- (c) When children proceed from the stage of pre operational thought to the stage of formal operations, they achieve sense of conservation and reversibility
- (d) Child development is largely culturally determined

iii- Autonomous functions of the ego include all of the following except:

- (a) Perception (b) Repression (c) Language (d) Intelligence

iv- Which of the following statements applies to the unconscious?

- (a) Its elements are inaccessible to the conscious (b) Its closely related to the pleasure principle (c) Its closely related to instincts (d) All of these

v- A gambler lost 1000 rupees at a racetrack but he was not upset. He said, "I would have spent the money on any other thing any way". Which defense mechanism does his statement involve?

- (a) Reaction formation (b) Undoing (c) Denial (d) Rationalization

vi- Fixed false belief based on incorrect inferences about external reality is called:

- (a) Delusion (b) Obsession (c) Overvalued Idea (d) Phobia

vii- A simple schizophrenia is characterised by:

- (a) An insidious loss of drive and ambition (b) Persistent Delusions (c) Persistent Hallucinations (d) All of these

viii- Which of the following instances suggest psychotherapy would be of no use?

- (a) A person who completely lacks remorse for past doing
(b) A person with an inability to form emotional attachment
(c) A person whose life situation cannot be modified
(d) A person who is a close friend of the analyst

ix- The most frequently cited characteristic among children with ADHD is:

- (a) Perceptual-motor impairment (b) Disorder of memory and thinking (c) Hyperactivity (d) Disorder of speech and learning

x- In operant conditioning:

- (a) Continuous reinforcement schedule is least susceptible to extinction
(b) Negative reinforcement is a type of punishment
(c) The process is related to trial and error learning
(d) Shaping occurs when responses are coincidentally paired to a reinforcer

xi- Ashi memorized her shopping list. When she got to the store she found out that she had forgotten many of the items in the middle of the list. This is an example of:

- (a) Inappropriate coding (b) Retrograde Amnesia (c) Proactive Interference (d) The serial position effect

xii- Positive reinforcement _____ the rate of responding; Negative reinforcement _____ the rate of responding:

- (a) Increases; decreases (b) Decreases;increases (c) Increases;increases (d) Decreases;decreases

xiii- Hormones are to endocrine system as _____ are to nervous system:

- (a) Nerves (b) Synapses (c) Neurotransmitters (d) Action Potential

xiv- The thalamus can be characterised as:

- (a) A regulatory system (b) The consciuos switch of the brain (c) A relay system (d) A bridge between two cerebral hemispheres

xv- Chomsky proposed that children learn a language:

- (a) One's thought determines the nature of one's language
(b) Language and thought are separate and independent processes
(c) Language and thought interact, each influencing the other
(d) Because they possess an innate language acquisiton device

xvi- According to James-Lange Theory of Emotion:

- (a) The experiences of emotions depends upon autonomic arousal and on one's cognitive interpretation of that arousal
(b) Different patterns of autonomic arousal lead to the experience of different emotions
(c) Emotions occur when the thalamus sends signals simultaneously to the cortex and to the autonomic nervous system
(d) Emotions develop becuase of their adaptive value

xvii- When the development of the same subject is studies over a period of time, the study is called a:

- (a) cross sectional study (b) longitudinal study (c) life history study (d) sequential study

xviii- The process of excluding from the consciousness the ideas and feelings which cause guilt and shame is known as:

- (a) Projection (b) Repression (c) Reaction formation (d) Regression

xix- The type of learning associated with skinner is:

- (a) Classical Conditioning (b) Operant Conditioning (c) Respondent Conditioning (d) Observation Learning

xx- The English Scientist who considered measuring intellingence by measuring head size:

- (a) Galton (b) Binet (c) Terman (d) Wechsler

Corrections welcomed..

2009 paper 1

1. In psychology , case studies are used to :

- a. draw conclusions , about individual behavior on the basis of group finding
- b. draw general conclusions about behaviour of the client
- c. assess heretibility of individual
- d. show importance of case studies.
- e. None of these

2. psychology is concenered with the study of :

- a. how group exchange resources
- b. overt behavior only
- c. mind and behavior
- d. how aggregate behavior is specified
- e. none of these

3. an independent variable is

- a. the only variable of interest
- b. a variable that is independently verified
- c. a variable whose value depends on dependent variable
- d. the variable that is manipulated by experimenter
- e. none of these

4. introspection is :

- a. a scientific method used to study dreams
- b. a psychotherapeutic technique where the patient gives a running account of internal dialogues
- c. a process used to uncover symbolic representation in dream
- d. the analysis of the content of our own thoughts.
- e. None of these

5. The law of effect states that :

- a. close temporal contiguity is the key characteristic in forming an association between stimulus and response.
- b. A response will be strengthened if the organism is rewarded for that response
- c. effect is strong if the effect is long lasting.
- d. Response generalize across similar surroundings.
- e. None of these

6. structuralism and functionalism are similar in that both :
- a. emphasize the analysis of mental structures to explain behavior
 - b. emphasize the fluid, personal nature of consciousness.
 - c. Regard psychology as the science of conscious experience.
 - d. Emphasize the observation of behavior rather than consciousness.
 - e. None of these.
7. the school of psychology that argues that nearly all behaviour is a result of conditioning and that the environment shapes behavior is labeled
- a. gestalt, wertheimer
 - b. psychoanalytic, freud
 - c. behaviorism, tichner
 - d. behaviorism, Watson
 - e. none of these
8. chemical which are produced in the brain, and facilitate communication between nerve cells are called:
- a. neurotransmitter
 - b. plasmas
 - c. syntactic structures
 - d. adrenocorticoids
 - e. none of these
9. psychologists , who typically apply psychological principles to diagnose and treat emotional problems , including illness and marital and family conflict are in the subfield called :
- a. biological
 - b. clinical and counseling
 - c. social and personality
 - d. school and educational
 - e. none of these
10. the first step in any research project is generating a:
- a. theory
 - b. experiment
 - c. hypothesis
 - d. proposition
 - e. none of these
11. the discipline that deals with sampling data from a population and then drawing inferences about the population from the sample is :

- a. hypothesis testing
- b. statistics
- c. multivariate experimentation
- d. independent sampling
- e. none of these

12. when two variables are correlated , variation in one ?

- a. may possibly cause variation in the other.
- b. Can only be inferred with social validation
- c. Can be cause of variation in the other only if the correlation is positive.
- d. Always suggests a causal relationship with the other.
- e. None of these.

13. in the early stages of research , the most efficient way of making progress toward explaining phenomenon is to :

- a. videotape
- b. precisely measure
- c. survey
- d. observe
- e. none of these

14. a scholarly summary of a body of research on some topic is called

- a. case history
- b. literature review
- c. meta-analysis
- d. theory
- e. none of these

15. the principle governing the ethical treatment of human participants in research essentially states that the hazards anticipated in the research project should be not greater than those encountered in the daily activities.

- a. informed consent
- b. right to privacy
- c. minimal risk
- d. informed participants
- e. none of these

16. S-R psychology is an approach associated with the perspective :

- a. behavioral
- b. psychoanalytic

- c. cognitive
- d. subjectivist
- e. none of these

17. psychologists who are interested in the perception of motion, part-whole relationship and in how people judge size were identified with what school of psychology?

- a. psychoanalytic
- b. gestalt
- c. behavioral
- d. structural
- e. none of these

18. the center of Freud's theory is the thoughts, attitudes, impulses, wishes and motivations of which we are unaware:

- a. conditioning concept
- b. unconsciousness
- c. biological motivation proposition
- d. multivariate construct
- e. none of these

19. relating overt behavior to electrical and chemical events taking place inside the body is characteristic of which contemporary perspective?

- a. behavioral
- b. subjectivist
- c. biological
- d. cognitive
- e. none of these

20. the subjectivist perspective in psychology:

- a. is most like cognitive one
- b. is generally not influenced by cultural and emotional variables
- c. has been most pervasive
- d. all of these
- e. none of these

2009 paper 2

1. a child is creating new schemata to account for new information, Piaget calls this process

- a. assimilation
- b. accommodation
- c. operations

- d. functional autonomy
 - e. none of these
2. children begin to understand and use abstractions during which of the piaget stages of cognitive development
- a. oral
 - b. preoperational
 - c. state of formal operations
 - d. secondary stage
 - e. none of these
3. which theoretical viewpoint emphasizes the importance of learning for understanding development
- a. fruedian
 - b. information processing theory
 - c. ecological theory
 - d. behavioral theory
 - e. none of these
4. behavior is governed by its consequences describe:
- a. operant conditioning
 - b. psychological crisis
 - c. supply demand theory
 - d. the yerkes Dodson law
 - e. none of these
5. which of the following statement is incorrect
- a. genetic influences affect children more than adults
 - b. even if genetic factors underlie a particular behavior, it is subject to change
 - c. trait suchs as extroversion and introversion are influenced by genes
 - d. intelligence has a genetic basis
 - e. none of these
6. if characteristic requires only one gene to show itself the characteristic is considered:
- a. dominant
 - b. co-dominant
 - c. incompletly dominant
 - d. recessive
 - e. none of these

7. a genetic disorder in which the production of mucous affects the respiratory system is
- huntington's disease
 - down syndrome
 - cystic fibrosis
 - sickle cell anemia
 - none of these
8. aptitudes are
- preferences to perform certain activities
 - high level of achievement in an area endeavour
 - the abilities of individual to learn in specific endeavour
 - skills one brings to a given task
 - none of these
9. in psychological research, a is defined as an entity that can occur with different values
- hypothesis
 - measurement system
 - variable
 - experiment group
 - none of these
10. ability to exercise precise control over a variable is what distinguishes the Method from other methods of scientific observation
- control group identification
 - randomized selection
 - hypothesis testing
 - experimental
 - none of these
11. consideration of participants in psychological research as in the research enterprise is a central principle of ethical research today
- informed participants
 - full partners
 - willing participants
 - co-investigators
 - none of these
12. maturation refers to
- the attainment of successive stages of cognitive development
 - relatively stable changes in an individual's thought or behavior as a result of a biological process

of aging.

- c. Relatively stable changes in an individual's thought or behavior as a result of accumulating experience
- d. The development of an individual's thought and behavior due to interaction of biological and environmental factors
- e. None of these

13. learning refers to

- a. the attainment of successive stages of cognitive development
- b. changes in an individual's thought or behavior as a result of biological process of aging
- c. changes in an individual's thought and behavior as result of accumulating experience
- d. The development of an individual's thought and behavior due to interaction of biological and environmental factors
- e. none of these

14. psychodynamic determinism refers to

- a. behavior that is ruled by forces over which we have no control
- b. behavior that is preconscious in origin
- c. id impulses that will forever remain unfulfilled
- d. the delimiting characteristics of superego
- e. none of these

15. according to Freudian dream terminology, condensation refers to

- a. repressed urges that find disguised outlets for expression
- b. the bizarre , irrational quality of dream
- c. the process whereby unacceptable thoughts or impulses are combined into a single dream image
- d. process where one thing may stand for another in dream interpretation
- e. none of these

16. according to one definition, behavior is abnormal if

- a. labeled as abnormal by the society in which the individual lives
- b. not under conscious control by individual statistically typical
- c. statistically typical
- d. adaptive to the individual
- e. none of these

17. Axis III in DSM-IV address:

- a. the major abnormal disorders
- b. primary personality disorders
- c. physical disorders

- d. the severity of psychological symptoms
- e. none of these

18. an individual who is identified as having a borderline personality disorder shows

- a. perceptory thoughts
- b. exhibitionistic tendencies
- c. instability in mood and social relations
- d. apathy and indifference to opinion of others
- e. none of these

19. clinical interview typically includes

- a. a follow up evaluation and assessment after therapy is terminated
- b. the initial diagnosis of a client's psychological functioning
- c. the psycho physiological functioning
- d. the client's initial and final evaluation
- e. none of these

20. two explicitly directive psychotherapeutic approaches are

- a. behavior therapy and psychodynamic therapy
- b. behavior therapy and humanistic therapy
- c. humanistic therapy and existential therapy
- d. cognitive therapy and behavior therapy
- e. none of these.

Psychology Mcqs From Past Papers

1) The social distance scale is mainly a measure of:

- a) Ethnic attitude
- b) Cohesiveness of a group
- c) Upward social mobility
- d) Social class differences
- e) None of these

2) A person has attitudes towards:

- a) All possible objects
- b) All objects which are perceived by him
- c) All objects which exist in his own life-space
- d) None of these

- 3) So-called “functional” and “organic” psychoses are:
- a) Really both functional in origin
 - b) Really both organic in origin
 - c) Clearly differentiated as to origin
 - d) Not clearly distinguishable
- 4) Which one of the following is not listed as a classification of psychoneurosis?
- a) Phobic reactions
 - b) Conversion reactions
 - c) Neurasthenic reactions
 - d) Delusional reactions
 - e) None of these
- 5) Psychoneurosis tends to be:
- a) Severe than the psychoses
 - b) Milder than neuroses
 - c) Milder than psychoses
 - d) About the same severity as the psychoses
 - e) None of these
- 6) In essence the defense mechanisms are:
- a) Defense against anxiety
 - b) Ways of convincing others of one's rightness
 - c) Escape reactions
 - d) Conscious self-deception
 - e) None of these
- 7) The Thematic Apperception Test is a:
- a) Situational test
 - b) Performance test
 - c) Projective test
 - d) Personality inventory
 - e) None of these
- 8) Psychosomatic disorders are best illustrated by:
- a) Asthma caused by anxiety
 - b) Neurotic anxiety
 - c) Insomnia
 - d) Over-eating
 - e) None of these

9) Dependence, passivity and greediness are regarded as traits found in the so-called:

- a) Anal character
- b) Phallic stage
- c) Genital stage
- d) Oral character
- e) None of these

10) Probably the most insidious form of defense mechanism is:

- a) Reaction formation
- b) Defensive identification
- c) Projection
- d) Withdrawal
- e) None of these

11) Endomorphy is to eotomorphy as:

- a) Love of comfort is to social inhabitation
- b) Social inhabitation is to love of comfort
- c) Love of comfort is to need for action
- d) Need for action is to social inhabitation
- e) None of these

12) Personality inventories are:

- a) Subjectively scored
- b) Objectively scored
- c) Always scored on a priori basis
- d) Always scored on an empirical basis
- e) None of these

13) The difficulty with type theories of personality is that they are:

- a) Too simple
- b) Too contradictory
- c) Too arbitrary
- d) All of these
- e) None of these

14) The concept of introversion and extroversion was advanced by:

- a) Spranger
- b) Kretschmer
- c) Jansch

- d) Jung
- e) None of these

15) The term “germ cell” when used in genetics refers to:

- a) Somatic cells
- b) Body cells
- c) Ova and sperm cells
- d) Both (a) and (b)
- e) None of these

16) The overall bodily and mental growth curves for man:

- a) Diverge at puberty age
- b) Run parallel course
- c) Show drop at puberty age
- d) Both (a) and (b)
- e) None of these

17) As the individual continues his growth after birth, the neural cell in his brain:

- a) Change their chemical composition
- b) Increase in number
- c) Both (a) and (b)
- d) None of these

18) With the onset of puberty, the rate of growth of:

- a) All bodily organs slow down
- b) Intellectual development slows down
- c) Both (a) and (b)
- d) Neither (a) and (b)

19) To mark the onset and termination of adolescence:

- a) Physiological measures are usually used for both boys and girls
- b) Physiological measures are usually used for girls but not for boys
- c) Physiological measures are usually used for the onset but not for the end
- d) Physiological measurements are usually used for both boys and girls

20) The prototype of the modern intelligence test for children was first developed by:

- a) Stanford
- b) Terman
- c) Binet

- d) Wechsler
- e) None of these

Psychology Mcqs For Public Service Exams

1-Psychology may best be described as the scientific study of _____ and _____.

- a. Mental states, physical states
- b. Thoughts, emotions
- c. Behavior, mental processes
- d. Mental health, mental illness
- e. None of these

2-Freud believed that adult problems usually:

- a. Result in Freudian slip
- b. Result in bad dreams
- c. Can be traced back to critical stage during childhood
- d. Are the result of poor behavior
- e. None of these

3-Gestalt theory emphasizes:

- a. A flow of consciousness
- b. The atoms of thought
- c. Environmental stimuli
- d. Our tendency to see pattern
- e. None of these

4-whereas the _____ asked what happens when an organism does something; the _____ asked how and why.

- a. Functionalist, behaviorist
- b. structuralist, introspectionist
- c. structuralist, functionalist
- d. Functionalist, structuralist
- e. None of these

5-the _____ lobe is to hearing as the occipital lobe is to vision.

- a. Frontal
- b. Temporal
- c. Parietal

- d. cerebeller
- e. None of these

6-reflexes are usually controlled by the:

- a. Medulla
- b. Frontal lobe
- c. Spinal cord
- d. Hypothalamus
- e. None of these

7- a part of the brain that sends signals “alert” to higher centers of the brain in response to incoming messages is:

- a. Limbic system
- b. Reticular formation
- c. amygdala
- d. Hippocampus
- e. None of these

8-perception of the brightness of a color is affected mainly by:

- a. The amplitude of light waves
- b. The wavelength of light waves
- c. The purity of light waves
- d. The saturation of light waves
- e. None of these

9-which of the following is not a clue for depth perception?

- a. Interposition
- b. Orientation
- c. Linear perspective
- d. Reduced clarity
- e. None of these

10-psychophysics is the study of:

- a. Perceptual illness
- b. The psychological perception of physical stimuli
- c. Depth perception
- d. Movement perception
- e. None of these

11-perceptual constancies are

- a. Illusion in which we perceive something that does not correspond to the sensory information
- b. Confusing to an individual rather than helping him determine what really exists
- c. Likely inborn and not subject to leaning
- d. An aid in perceiving a stable and consistent world
- e. None of these

12-which of the following is a subdivision of the autonomic nervous system?

- a. Both the sympathetic and Para-sympathetic nervous system
- b. Only sympathetic nervous system
- c. Only the parasympathetic nervous system
- d. Brain and spinal cord
- e. None of these

13-any stimulus that follows a behavior and increases the likelihood that the behavior will be repeated is called a:

- a. Cue
- b. Situational stimulus
- c. reinforcer
- d. Punisher
- e. None of these

14-Conditioned response may be eliminated by withdrawing reinforcement. This is known as:

- a. Stimulus generalization
- b. Extinction
- c. Discrimination
- d. Spontaneous recovery
- e. None of these

15- the ability to learn by observing a model or receiving instructions, without reinforcement, is called_____

- a. Cognitive learning
- b. Contingency
- c. Social learning
- d. Instrumental learning
- e. None of these

16-analysis of avoidance learning suggest that many phobias are acquired through _____ conditioning.

- a. Classical

- b. Operant
- c. Reinforcement
- d. Intermittent
- e. None of these

17-the James-Lange or body reaction theory of emotion says

- a. You feel emotion then a bodily reaction
- b. You react with your body first then you feel emotion
- c. The somatic nervous system is the seat of emotion
- d. Emotions and visceral reactions are simultaneous
- e. None of these

18-the frustration-aggression hypothesis;

- a. Assume that aggression is basic instinct
- b. Claims that frustration and aggression are both instinctive
- c. Assumes that frustration produces aggression
- d. Was developed by social learning theorist
- e. None of these

19-in Freud's theory of personality

- a. The ego obeys the reality principle
- b. The id operates by secondary process
- c. The superego obeys the pleasure principle
- d. The ego operates by primary process thinking
- e. None of these

20-which of the following approaches to personality is least deterministic?

- a. The humanistic approach
- b. The psychoanalytic approach
- c. The social learning approach
- d. The behavioral approach
- e. None of these

1-The child's increasing skill at using his muscles is due chiefly to:

- a. Maturation
- b. Learning
- c. Pushing by parents
- d. An opportunity to exercise
- e. None of these

2-The stage of prenatal development during which the developing organism is most vulnerable to injury is the:

- a. Zygotic stage
- b. Germinal stage
- c. Fetal stage
- d. Embryonic stage
- e. None of these

3-Which of the following is part of the psychosocial domain?

- a. Motor skills
- b. Memory
- c. Judgment
- d. Style of behaving
- e. None of these

4-It would be more accurate to say that maturation:

- a. Can be delayed by illness or poor nutrition
- b. Is dramatically accelerated by good nutrition
- c. Is greatly accelerated by good health care and delayed by illness
- d. Is not affected by any environmental factors because it is genetic
- e. None of these

5-The first two weeks of life are referred to as:

- a. The period of infancy
- b. The preoperational stage
- c. Early childhood
- d. The neonatal period
- e. None of these

6-An individual becomes a member of social group through the process of:

- a. Aging
- b. Socialization
- c. Learning
- d. Maturation
- e. None of these

7-When a researcher tests several groups of people at the same time each group at a different age, he is conducting a(n) _____ study.

- a. Observational
- b. Longitudinal

- c. Cross-sectional
- d. Sequential
- e. None of these

8-Piaget's stage for infancy is:

- a. Concrete operations
- b. Formal operation
- c. Preoperational thought
- d. Sensory motor thoughts
- e. None of these

9-Job satisfaction is enhanced by tasks that are:

- a. Challenging but not overwhelming
- b. Very easy to accomplish
- c. Overwhelming and rewarding
- d. Unrelated to one's personal needs
- e. None of these

10-Basic characteristics of tasks that result in social loafing is that they are:

- a. Addictive
- b. Subtractive
- c. Multiplicative
- d. Negative
- e. None of these

11-The process by which a trained professional uses psychological methods to help people with psychological problem is known as:

- a. Psychiatry
- b. Psychoanalysis
- c. Psychotherapy
- d. Psychosurgery
- e. None of these

12-Albert Ellis and Aron Beck are names associated with the ____ therapy approach.

- a. Gestalt
- b. Cognitive
- c. Behavioral
- d. Phenomenological
- e. None of these

13-An affective disorder in which a person swings from one mood extreme to another is classified as:

- a. Manic
- b. Depressive
- c. Unipolar
- d. Bipolar
- e. None of these

14-The leading cause of mental retardation is believed to be:

- a. Fetal alcohol syndrome
- b. Organic brain syndrome
- c. Environmental factors
- d. Inherited traits
- e. None of these

15-People who consistently come up with _____ explanations of events are more prone to depression.

- a. Overly optimistic
- b. Pessimistic
- c. Delusional
- d. dysthemic
- e. None of these

16-According to Piaget the process of building mental representation of the world through direct interaction with it is:

- a. Adaptation
- b. Egocentrism
- c. metacognition
- d. Conservation
- e. None of these

17-Intelligence can be defined as:

- a. Knowledge of a great many facts
- b. The ability to get good grades in school
- c. The ability to think abstractly and learn from experience
- d. All the factors that make one person different from another
- e. None of these

18-When people are _____ they have lost touch with reality.

- a. Manic

- b. Neurotic
- c. Psychotic
- d. Psychopathic
- e. None of these

19-Which of the following clinical procedures are based, in part on classical conditioning?

- a. Transference
- b. Systematic desensitization
- c. Token economy
- d. Two chair technique
- e. None of these

20-Illnesses that seem to result from an interaction of physical and psychological factors are called:

- a. Hysterical
- b. Psychosomatic
- c. Somatic
- d. Conversion disorder
- e. None of these

Psychology Mcqs From Past Papers

(1) The four main goals of psychological research are:

- (a) Description, experimentation, prediction and control
- (b) Description, explanation, assessment and manipulation
- (c) Description, prediction, assessment and manipulation
- (d) Description, explanation, control and validity
- (e) None of these

(2) A verifiable scientific finding is one that can be:

- (a) Observed in real life
- (b) Proven impossible to test
- (c) Proven valid, accurate and indisputable
- (d) Replicated with the same result
- (e) None of these

(3) An independent variable is:

- (a) The only variable of interest
- (b) A variable that is independently verified
- (c) A variable whose value depends on that of the dependent variable

- (d) The variable that is manipulated by experiment
- (e) None of these

(4) The main regions of brain are the:

- (a) Hind brain, forebrain, midbrain
- (b) Cerebral cortex, forebrain, hind brain and midbrain
- (c) Forebrain, midbrain and anterior region
- (d) Central hemisphere, and left hemisphere
- (e) None of these

(5) Of the three different types of the neurons, sensory neurons are unique in that they:

- (a) Carry impulses from the brain and spinal cord to parts of the body that then respond to the impulse.
- (b) Receive information from the receptor cells and send this information to the brain or spinal cord.
- (c) Reside exclusively in the peripheral nervous system has two functions, to send signals to motor neurons, and to receive signals from receptors.
- (d) None of these

(6) The four parts of the neurons are:

- (a) Axon, cell body, myelin sheath and dendrites
- (b) Axon, dendrites, nucleus and terminal buttons
- (c) Axon, cell body, dendrites and terminal buttons
- (d) Axon, dendrites, myelin sheath and nodes of ranvier
- (e) None of these

(7) Effectors and receptor cells are different in:

- (a) Their composition and speed of conduction
- (b) The direction in which they carry nerve impulses
- (c) The corresponding branch of the nervous system to which they belong
- (d) The effectors never connect with the brain, while receptors receive information from the brain.
- (e) None of these

(8) Three dimensional perception of the world is referred to as:

- (a) Stereopsis
- (b) Stroboscopy
- (c) Multiple perspectives
- (d) Normal vision
- (e) None of these

(9) Perpetual constancy refers to:

- (a) Perception of an object remaining the same even when our immediate sensation of the object changes.
- (b) Perceptual tendency to group objects together on the basis of their similarity.
- (c) Perception of an object's changing even though the object stays the same
- (d) Tendency to close up, incomplete objects into already existing perceptual shapes
- (e) None of these

(10) Gestaltists refer to the fact that we perceive smooth flowing forms more readily than discrete forms as:

- (a) Similarity
- (b) Symmetry
- (c) Holistic perception
- (d) Continuity
- (e) None of these

(11) Classical conditioning is a process whereby:

- (a) Certain response result from certain stimulus presentations
- (b) The CS is always presented before the UCS
- (c) Actions that are reward tend to be strengthened
- (d) Learning occurs when a stimulus is paired with a certain response
- (e) None of these

(12) Edward Tolman's experiments with rats showed that:

- (a) Learning could be achieved without reinforcement
- (b) Rats could learn second order conditioning in the absence of food
- (c) All rats behaviour could be analyzed by stimulus – response contingencies
- (d) The law of effect was not valid in all animals
- (e) None of these

(13) Albert's Bandura's social learning theory holds that:

- (a) Learning is best in group settings
- (b) Learning can be achieved by observing and modeling another person's behaviour
- (c) Mere exposure to an aggressive scene always later elicits aggressive behaviour
- (d) Social learning takes place at an unconscious level
- (e) None of these

(14) According to Marlow's hierarchy of needs, individuals:

- (a) May bypass a level in their quest for self actualization
- (b) Must satisfy self-esteem needs before achieving belongingness and love needs

- (c) Always end their lives self actualized
 - (d) Must satisfy esteem needs before the process of self-actualization
 - (e) None of these
- (15) Research by Edward Deci has suggested that extrinsic motivators are more effective when they are:
- (a) Stated up front so that the individual knows what he or she will be receiving
 - (b) Tangible and easily identifiable
 - (c) Received immediately before the task is accomplished
 - (d) Intangible, such as verbal praise or smile
 - (e) None of these
- (16) Goals can help us motivated by all the following except:
- (a) Focusing our attention
 - (b) Encouraging alternative ways of achieving goals
 - (c) Allowing us the freedom to be spontaneous in our activities
 - (d) Mobilizing our resources
 - (e) None of these
- (17) Psychodynamic determinism refers to:
- (a) Behaviour that is ruled by forces over which we have no control
 - (b) Behaviour that is preconscious in origin
 - (c) Id impulses that will forever remain unfulfilled
 - (d) The delimiting characteristics of the superego
 - (e) None of these
- (18) According to Freudian, dream terminology, condensation refers to:
- (a) Repressed urges that find disguised outlets for expression
 - (b) The bizarre, irrational quality of dreams
 - (c) The process whereby unacceptable thoughts or impulses are combined into a single dream image
 - (d) The process whereby one thing may stand for another in dream interpretation
 - (e) None of these
- (19) Group popularization is an affect whereby:
- (a) Extreme opinions in a group become moderate with increased group interaction
 - (b) Group members moderate positions become polarized with increased group interaction
 - (c) Group decisions represent an exaggeration of the group members initial positions
 - (d) The group members' main concern is to maintain unanimity and group cohesion
 - (e) None of these

(20) Group think is unlikely to occur when which of the following factors is present?

- (a) There is a high degree of stress in the decision-making process
- (b) There are clear objective in the decision making process
- (c) The group is homogeneous in composition
- (d) The group is ideologically isolated
- (e) None of these

(1) The study of the hereditary transmission of attributes is:

- (a) Heritability, biological traits
- (b) Genetics, genes
- (c) Adaptability, dominant and recessive traits
- (d) Mutation, differentiation
- (e) None of these

(2) A male born with an extra Y chromosome, XYY, shows some evidence of increased aggressiveness and typically scores lower than normal on intelligence tests:

- (a) Turner's syndrome
- (b) Supermale Syndrome
- (c) XXX syndrome
- (d) Kinfefelter's syndrome
- (e) None of these

(3) The material of which chromosomes are composed is called:

- (a) Deoxyribonucleic acid
- (b) Genes
- (c) Atoms
- (d) Myelin
- (e) None of these

(4) Maturation refers to:

- (a) The attainment of successive stages of cognitive development.
- (b) Relatively stable changes in an individual's thought and behavior or a result of biological processor of aging.
- (c) Relatively stable changes in an individual's thought and behavior as a result of accumulating experience.
- (d) The development of an individual thought and behavior due to the interactions of biological and environmental factors
- (e) None of these

- (5) According to one definition, behavior is abnormal if it is:
- (a) Labeled as abnormal by the society in which the individual lives
 - (b) Not under conscious control by the individual
 - (c) Statistically typical
 - (d) Adaptive to the individual
 - (e) None of these
- (6) Anxiety disorders may be characterized by:
- (a) Psychotic symptoms
 - (b) Low affect
 - (c) Telegraphic thoughts
 - (d) Somatic symptoms
 - (e) None of these
- (7) Two examples of mood disorders are:
- (a) Major depression and generalized anxiety disorder
 - (b) Obsessive compulsive disorder and manic-depressive disorder
 - (c) Major depression and bipolar disorder
 - (d) Major depression and obsessive compulsive disorder
 - (e) None of these
- (8) An individual cannot remember events during an immediately following a serious airplane crash:
- (a) Dissociative amnesia
 - (b) Dissociative fugue
 - (c) Retrograde amnesia
 - (d) Fractured amnesia
 - (e) None of these
- (9) A type of schizophrenia characterized by hallucinations, delusions, and diffuse psychological organization is referred to as:
- (a) Undifferentiated
 - (b) Disorganized
 - (c) Residual
 - (d) Fragmented
 - (e) None of these
- (10) An individual who is identified as having a borderline personality disorder shows:
- (a) Persecutory thoughts
 - (b) Exhibitionistic tendencies
 - (c) Instability in mood and social relations

- (d) Apathy and indifference to the opinions of others
- (e) None of these

(11) Which symptoms is not typically characteristic of an autistic child?

- (a) Impairment in communication
- (b) Hyperactivity
- (c) Restricted range of interest
- (d) Social isolation
- (e) None of these

(12) The Stanford-Binet, WAIS-R and WISC are known to have very high reliability. This means that:

- (a) A pretest has been given to a representative
- (b) The test yields consistent results, for example-retesting
- (c) The test measures what it is supposed to measure
- (d) The result of the test will be distributed on a bell shaped curve
- (e) None of these

(13) The experience that has the clearest, most profound effect on intellectual development:

- (a) Being enrolled in Head Start Program
- (b) Growing up in an economically disadvantaged home or neighbourhood
- (c) Being raised in a very neglected home
- (d) Being exposed to very stimulating toys and lessons in infancy

(14) A therapist who encourages clients to relate their dreams and searches its roots is:

- (a) Psychoanalysis
- (b) Humanistic therapy
- (c) Person-centered therapy
- (d) Cognitive therapy
- (e) None of these

(15) The most enthusiastic or optimistic view of Psychotherapy comes from:

- (a) Outcome research
- (b) Psychologist Hans Eysenck
- (c) Reports of clinicians
- (d) An NIMH study of treatment for depression
- (e) None of these

(16) An approach that seeks to alleviate poverty and to other stresses that put people at high risk for developing psychological disorders is:

- (a) Biomedical therapy

- (b) The humanistic approach
- (c) Empathy and active listening
- (d) Preventive mental health
- (e) None of these

(17) If a person washes his hands 100 times a day, the behavior will be labeled disordered because it is:

- (a) Unjustified and maladaptive
- (b) An atypical behavior
- (c) Not explained by the medical model
- (d) Harmful and disturbing to others

(18) The DSM-111-R has improved reliability because it helps mental health workers base their diagnosis on:

- (a) A few well-defined categories
- (b) In-depth history of the patient
- (c) The patient's observable behaviour
- (d) The theories of Pinel, Freud and others
- (e) None of these

(19) An episode of intense dread, which is typically accompanied by feelings of terror and dizziness, chest pain etc. is called:

- (a) Generalized or chronic anxiety
- (b) A social phobia
- (c) A panic attack
- (d) An obsessive fear
- (e) None of these

(20) Amnesia, fugue and multiple personality involve gaps in awareness, for example, sudden loss of memory or change of identity. These Psychological disorders are called:

- (a) Anxiety disorders
- (b) Dissociative disorders
- (c) Mood disorders
- (d) Memory disorders
- (e) None of these

1) Developmental psychologists believe that two factors that influence human development are:

- a) Motivation and emotion
- b) Self and others

- c) Genetic make up and experience
 - d) Rewards and punishments
- 2) Motor skills are largely a result of:
- a) Learning
 - b) Maturation process
 - c) Practice
 - d) Observing other
- 3) In Piaget's theory, the first two years of life are called the — stages:
- a) Paralinguistic
 - b) Exploratory
