### Multiple Choice Questions

(Encircle the correct answer choice)

Note: Here we are dealing with principal function or capital function i.e.

- Instead of sin x, we use Sin x.
   Instead of cos x, we use Cos x
   Instead of tan x we use Tan x etc. While in chapter 11, General functions were discussed and symbols sinx, tanx etc. were used.
- 2. Here we are restricting the domain to make the function (1-1), so that its inverse is to be calculated.
- 3. Inverse of general Trigonometric functions does not exist. It exists only when function is (1-1), to make the function (1-1), we restrict the domain of the function and we call the function principal or capital functions. We denote the principal functions as:

$$y = \sin x$$
,  $y = \cos x$ ,  $y = \sec x$   
 $y = \operatorname{Cosec} x$ ,  $y = \operatorname{Tan} x$ ,  $y = \operatorname{Cot} x$ 

1. If  $y = \sin x$ , then Domain is
